SUMMARY

This is the Annual Progress Report for the fifth Fiscal Year (FY05) of the Rural Water Supply and Sanitation Project in Western Nepal Phase II. It covers the Nepali Fiscal Year 2074/075 (July 16, 2017 to July 16, 2018). The report presents the progress of both the municipality programs funded through the Municipality WASH Funds and the work funded through Technical Assistance budget. The year was the first year that the Project operated through the municipalities rather than through the districts. This was also the first year in operation for the municipalities themselves, with a number of policies and practices still being work in progress at the central level.

The changing context brought a lot of extra work to the Project, this progress report being the first time we report financial progress from 99 local government units rather than 14 as previously practiced. The budget for this year was record high which added into the challenge. Yet, 96 % of the budget was released to Municipality WASH Funds (compared to 94% in FY04), with the actual expenditure out of released being 93% (compared to 90% in FY04) and from the budget 89% (compared to 85% in FY04) when considering the Government of Finland, the Government of Nepal and the municipalities' contributions. Out of the Technical Assistance budget, 88% of the budget was remarkable: the municipalities released more funds within one year than what the districts released in total within four years. In several cases the municipalities actual contribution exceeded the budget.

Despite of the challenging year, the Project could mostly reach the targets set for FY05 (Table 1). By the end of FY05, the Project has supported total 361 new water supply schemes, 4,194,550 people have benefited from improved sanitation in Open Defecation Free environment and 298,086 participants have attended capacity development events. At the start of the final year of Phase II, there are 66 water supply schemes at the Implementation Phase and 71 completed but yet to be financially cleared. Only physically completed schemes are included in the Project progress figures.

| Indicators | FY05 achievement | Cumulative FY05 end | Cumulative Targets |
|--|---------------------------------|---|---|
| 150,000 people benefit from access to improved water supply | 64,177 people | 174,983 people (117 % of final target) | FY05: 140,000 FY06: 210,000 <i>(150,000)</i> |
| Beneficiaries from schemes supported for post-construction activities | 27,907 | 156,571 (78 % of final target) | FY05: 166,000 FY06: 200,000 |
| More than 250,000 people benefit from capacity building activities | 81,806 participants | 298,070 (119 % of final target) | FY05: 220,000 FY06: 306,200 (250,000) |
| R1.1. # of municipality wards declared ODF | 23 wards with 188,595 people | 4,189,485 people (95 % of final target) | All declared ODF |
| R1.2. # of institutions/schools/public sanitation | 66 | 243 (110 % of final target) | FY05: 200 FY06: 246 <i>(220)</i> |
| R1.3 # of HHs that have achieved HH level Total Sanitation (TS) | 30,412 HHs | 30,412 HHs (61 % of final target) | FY06: 50,000 HHs |
| R2.1. # of water supply schemes apply Water Safety Plan | 99 | 382 (76 % of schemes that should apply WSP++) | 90 % of gravity, lift and overhead tank schemes in Program municipalities |
| R2.3. # of water supply schemes provide improved water supply services for previously unserved HHs | 85 schemes | 280 schemes (108 % of final target) | FY05: 255 FY06: 324 <i>(260)</i> |

Table 1. Examples of RWSSP-WN II achievements within FY05 (Original targets in brackets)

1 PROJECT DESCRIPTION

Rural Water Supply and Sanitation Project in Western Nepal Phase II (RWSSP-WN II) is a bilateral water supply, sanitation and hygiene (WASH) project supported by the Government of Nepal (GoN) and the Government of Finland (GoF). The responsible agencies of RWSSP-WN II at the national level are the Ministry of Federal Affairs and General Administration (MoFaGa) and its Department of Local Infrastructure Development and Agricultural Roads (DoLIDAR). The Technical Assistance (TA) consultant for RWSSP-WN II is FCG International Ltd (Finnish Consulting Group), Finland. RWSSP-WN II is implemented through the decentralized governance system following the rules and regulations of GoN.

The overall objective (impact), which RWSSP-WN supports GoN to achieve, is improved health and fulfilment of the equal right to water and sanitation for the inhabitants of the Project area. The purpose of Phase II (outcome) is the poorest and excluded households' rights to access safe and sustainable domestic water, good health and hygiene ensured through a decentralized governance system. See **Annex 1** for the progress results and the logical framework where some of the indicators were changed at the start of the reporting year aligning the work with the changing context.

Box 1. Project result areas

The project contributes to three result areas:

Result 1. Access to sanitation & hygiene for all achieved and sustained in the project working districts.

Result 2. Access to safe, functional & inclusive water supply services for all achieved and sustained in the project working municipalities.

Result 3. Strengthened institutional capacity of government bodies to plan, coordinate, support and monitor the Water Users and Sanitation Committees and other community groups in the implementation, operation and maintenance of domestic water, sanitation and hygiene programs in a self-sustainable manner.

To fulfil the project objective, RWSSP-WN II has always had a strong focus in supporting local governments, institutions and communities in providing and implementing sustainable WASH services. Until the end of FY04, the Project activities were implemented through the District Development Committees (DDC), Village Development Committees (VDC), District and Village WASH Coordination Committees and rural communities, represented by WUSCs and for sanitation, by Institutional Management Committees (IMCs), at an individual scheme level. The Project has supported WASH sector development and implementation in the following districts of Nepal: Baglung, Nawalparasi, Myagdi, Parbat, Syangja, Mustang and Tanahun of Province 4 and Arghakhanchi, Gulmi, Kapilvastu, Nawalparasi, Pyuthan, Palpa and Rolpa of Province 5.

At the start of the reporting year, the Project started operating through the newly formed rural municipalities (*Gaunpalikas*) and municipalities (*Nagarpalikas*), hereafter both referred to as '*municipality*', see **Annex 2** for the municipalities supported during the reporting year and **Annex 3** for their progress report. The previous District WASH Units were restructured as Technical Support Units that operated under the District Coordination Committees (DCC) over the reporting year. Counting together all the municipalities and DCCs, in total, the funds were channeled through 99 local units.

Over the reporting period Nepal went through a historical process of state restructuring, in which central power was transferred to newly established governmental units. By January 2018, Nepal was divided into seven states, each which is further divided into municipalities. In the turbulent political situation, RWSSP-WN II continues to support local governmental units and rural communities also in the new governmental system. This is the first progress report that captures the progress from 85 municipalities and 14 TSUs instead of 14 districts.

2 PROGRESS TOWARDS ACHIEVEMENT OF EXPECTED RESULTS

RWSSP-WN II has 15 outputs through which the Project contributes to its outcomes and impact. The outputs are under three result areas as described in the previous chapter and measured by indicators. This chapter presents the development needs addressed by the Project and the achievements per each result area. The Project logical framework and table of output results is presented in **Annex 1**.

2.1 Result 1: Access to sanitation & hygiene for all achieved and sustained in the project working districts

Despite of great efforts, Nepal did not reach its target to become Open Defecation Free (ODF) country by the end of 2017 as envisioned in the Nepal Sanitation and Hygiene Master Plan. ODF status requires that all households in a certain area have access to improved toilets with full use, operation and maintenance (O&M), and all schools and public institutions have toilet facilities. As the latest studies of RWSSP-WN II show (Brief-series 2018), sustainability of ODF status is questionable even in ODF declared areas: toilets might not be finished, they might not be used by all or they might not be used at certain times. Despite of the failure to reach country-wide ODF status, the campaign has been successful: in RWSSP-WN II working area, 315 VDCs and municipality wards with 1,803,073 people have been declared ODF in the last five years.

2.1.1 Output 1.1: Municipality Wards declared ODF

Due to the state restructuring and newly established municipalities, starting at FY05, RWSSP-WN II is counting ODF declared Municipality Wards instead of VDCs. By the end of FY05, 12 out of 14 Project working districts have declared ODF, Palpa declaring latest, 7.4.2018. In FY05, the last remaining municipality wards in Rupandehi (3 wards & 2,485 households (HH) in Gaidahawa and 12 wards & 9,921 HH in Lumbini Sanskritik) were declared ODF and the whole Rupandehi district is ready to be declared and is waiting for the final monitoring. In FY05, total 8 wards in Kapilvastu district were declared ODF with 25,313 HH. The full FY05 ODF progress is presented in table 2.

| Municipality | Wards declared in FY05 | HH in declared wards | Direct ODF beneficiaries (HH) per Municipality | Wards remaining to be declared |
|-----------------------|---------------------------|-------------------------|---|-----------------------------------|
| | | | | |
| Bijayanagar | 2 | 20,000 | 2,000 | 0 |
| Kapilvastu NP | 0 | 0 | 627 | 7 |
| Maharajgunj | 2 | 1,677 | 1,200 | 3 |
| Mayadevi | 3 | 2,513 | 2,771 | 1 |
| Suddodhan | 1 | 1,123 | 2,131 | 3 |
| | | Rup | oandehi | |
| Gaidahawa | 3 | 2,485 | 2,485 | 0 |
| Lumbini Sanskritik | 12 | 9,921 | 4,209 | 0 |
| TOTAL | 23 | 37,719 | 15,423 | 14 |

| Table 2. ODF declared Mu | nicinality Wards and | nonulation in FYO5 |
|--------------------------|----------------------|--------------------|
| | incipancy wards and | population in 1105 |

In FY06, the Project will continue ODF campaign in its working area in Kapilvastu district. It is anticipated that Kapilvastu district will declare ODF within the next FY which would mean that the whole RWSSP-WN II Project area will receive ODF status.

100

Approximately 2,368,153 people have benefitted from household latrines in the Project area during RWSSP-WN Phase II and 4,189,485 people live in ODF declared municipality wards which is 95 % of the total population of RWSSP-WN II working districts. Most of the household latrines are single-pit pour-flush-latrines, one latrine per one household. Latrine sharing between households is not a common practice in Nepal.

Even though pour-flush latrines help to separate excreta from human contact when in use, safe management of the faecal sludge is questionable once the pit gets full. Most single-pit latrines do not permit sludge composting. Most pits are not even designed to be emptied at all. In these cases, a completely new latrine with a new pit must be constructed once the pit fills up. This is challenging especially in densely populated areas such as Terai where households do not often have land to build many latrines. Furthermore, most pits are not well sealed but let liquids soak into the soil. This can be hazardous if the latrine is located near water sources. Especially in Terai, where tube wells are used, leaking pits cause a health risk.

WHO & UNICEF Joint Monitoring Programme for Water Supply and Sanitation (JMP) has developed a framework for integrated monitoring of water, sanitation and hygiene related Sustainable Development Goals (SDG) targets (Table 3). Figure 1 shows people living in RWSSP-WN II working area as per the JMP service level ladder.

| Table 3. JMP 9 | Sanitation ladder | | 100 | | | 5 |
|--------------------|--|---------------|----------|-------------------|--|-------------------|
| SAFELY MANAGED | Use of improved facilities that are not shared with other households and where excreta are safely disposed of in situ or transported and treated offsite | - | 80 | 30 5 | 35 | |
| BASIC | Use of improved facilities that are not shared with other households | opulation (%) | 60 | 19 | 6 14 | |
| LIMITED | Use of improved facilities shared between two or more households | Pop | 40 20 | 46 | 45 | 95 |
| UNIMPROVED | Use of pit latrines without a slab or platform, hanging latrines or bucket latrines | | 0 | National | Rural | RWSSP-WN |
| OPEN DEFECATION | Disposal of human faeces in fields, forests, bushes, open bodies of water, beaches or other open spaces, or with solid waste | | | Bas Lin Uni | ely mar sic servi nited se improve en defe | ce rvice ed |

Table 3. JMP sanitation ladder

Figure 1. People living in RWSSP-WN II supported municipality wards as per JMP sanitation ladder (n=4,410,739). National and rural figures are from 2015 as in: WHO & UNICEF (2017) Progress on drinking water, sanitation and hygiene: 2017 update and SDG baselines. Available: https://www.unicef.org/publications/index_96611.html

Due to the lack of safe treatment of excreta, RWSSP-WN II sanitation beneficiaries use mainly basic sanitation facilities. According to JMP data from 2015, at least 45% of the Nepal rural population is using basic sanitation facilities. In reality, also unimproved sanitation facilities are frequently found in ODF declared areas as various studies of the Project show. Sustainable use of sanitation facilities is also a challenge: even when a household has a toilet, it is not always used by all the family members at all times and it is common that open defecation is practiced at least occasionally. Safe management of faecal sludge is a challenge that requires action from the whole WASH sector.

2.1.2 Output 1.2: Public/institutional/school toilets constructed

The Nepal Sanitation and Hygiene Master Plan requires that each ODF declared area must have toilet facilities in all the public, institutional and school buildings. Recent studies by RWSSP-WN II have shown that poor school sanitation affects especially girls' education as poor sanitation conditions make it impossible to manage menstrual hygiene. It is not enough to have a toilet; the toilet must also have privacy and water as minimum conditions. Generally, the condition of school sanitation is very poor, and the toilets are often found in intolerable state. When it comes to public toilets, one lesson learnt is that the toilet must be attached to a shop so that the toilet management generates income. This is the way to increase motivation in toilet maintenance in long-term.

In FY05, RWSSP-WN II implemented 9 school (31 cumulative), 12 institutional (64 cumulative) and 45 public (148 cumulative) toilets reaching a cumulative figure of 243 exceeding the end-line target 220. The school toilets serve a cumulative figure of 9,268 students (51 % girls and 49 % boys). No new school, institutional or public toilets are included in the FY06 work plan.

Box 2. Unimproved school sanitation = missed school days

Unimproved school sanitation = missed school days

School sanitation plays a big role in whether girls can fulfil their right to education. In recent study of RWSSP-WN II, total, 18 % of 338 girls reported that they miss school days because of menstruation. Out of the girls that reported missing school days, 28.1 % said they do this because there is nowhere to wash and change at school, 35.2 % said there is no place to dispose sanitary products and 34.6 % said they do not have sanitary materials to use during periods. The results show that Menstrual Hygiene Management (MHM) is an issue to address also in Western Nepal. (RWSSP-WN Brief 6-2018).

2.1.3 Output 1.3: HHs that have achieved HH level Total Sanitation

To sustain the achieved ODF status and further improve sanitation and hygiene, the Nepal Sanitation and Hygiene Master Plan presents Total Sanitation (TS) as the next phase after ODF declaration. The TS activities that all HH members must practice differ slightly between different organizations and programs and in RWSSP-WN II a TS declared HH must fulfil at least four of the following indicators:

Box 3. TS indicators

- 1. Use of toilet
- 2. Hand washing with soap at critical times
- 3. Safe handling and treatment of drinking water
- 4. Maintenance of personal hygiene
- 5. Proper solid and liquid waste management at household and institutional levels

Before FY05, TS progress was measured by TS declared VDC wards and the Project had reached its end-line target (300 wards) already in FY04. In the new municipality structure, one municipality ward can be the size of one full VDC and that is why from FY05 onwards the Project is counting HHs that fulfil TS indicators in the Project working area. In FY05, the Project reached 30,412 new TS HHs which is 61 % of the total target (50,000 HH) set for the two final years of the Project. In total, 21 municipalities (33 %) out of 63 fulfilled their annual TS targets. The municipality-wise targets varied between 66 HH and 2,500 HHs which tells about large differences in sanitation status. In some locations most HHs are ready to be declared whereas in other areas even toilet use is questionable, and the campaign must start from zero. In case TS program will continue in 50 municipalities in FY06, the annual target is 25,137 HH.

2.2 Analysis on the successes and constraints within the Results area 1

The outcome, the Results area 1 outputs contribute to is access to sanitation & hygiene for all achieved and sustained in the project working municipalities. This chapter analyses how the outputs have contributed to the outcome. Table 4 presents the targets set for FY05, the project progress within FY05 and the cumulative progress until the end of FY05 (% of end-of-project target). The new end-of-project targets were presented in the Annual Work Plan FY05 to fit into the new context (extension year and additional investment funds).

| Indicators | Cumulative target for FY05 (% of end-of- project target) | Achieved within FY05 | Cumulative actual FY05 end (% of end-of- project target) | End of project target |
|---|---|----------------------------|---|--------------------------|
| 1.1. Municipality wards declared ODF | 37 (100 %) | 23 | 23 (62%) | All declared ODF |
| 1.2. Institutions/schools/public toilets | 200 (91%) | 66 | 243 (110%) | 220 |
| 1.3. HHs that have achieved HH level Total Sanitation | 44,426 (89%) | 30,412 | 30,412 (61%) | 50,000* |

Table 4. Project achievements within the Results area 1

Green=on track, yellow = almost there, red=special attention needed

*Achieving the target is dependent on the additional EUR 500,000.

Even though RWSSP-WN II has made great progress under the results area 1 and fulfilled the initial targets set for the indicators 1.2 and 1.3, the sustainability of the achievements remains uncertain. Recent studies conducted by the Project have shown that even in ODF declared areas, not all the people have toilets and even if they do, some continue to practice open defecation. Furthermore, the maintenance of public, school and institutional toilets remains a challenge despite of some exemplary cases.

A study in three ODF declared wards of Mayadevi Rural Municipality, Kapilvastu (RWSSP-WN Brief 1-2018) showed that 72% of the 161 respondents (one per HH) stated that about half or 'most' people in their community do practice open defecation. In one of the study locations, Pipara, Gaura Ward 4, only 6 respondents (one per HH) out of 61 stated they did not go for open defecation in the last 7 days. This means that 90 % of the respondents still practice open defecation at least sometimes. Visual data collected during the survey showed also that many HHs have temporary toilet superstructures and some of the toilets are not in use.

Another toilet use survey (RWSSP-WN Brief 9-2018) that covered 932 respondents in eight ODF declared municipalities in both Terai and Hill showed that only 416 (45 %) of the respondents had not practiced open defecation in the past seven days and only 313 (34 %) had not practiced open defecation in the last seven days and would not practice it either in any special days. Out of all the respondents, 33 % gave reasons for not using the toilet in special times and 16 % of them stated they would not or their family members would not use the toilet during menstruation. The results show that open defecation is still widely practiced in ODF declared areas and having a toilet is not enough to fight this harmful behaviour. What was especially shocking was the finding that menstruation-based discrimination is still widely practiced also in Western Nepal – an issue that was thought to be a challenge mainly in the Far West.

Based on the findings, the Project developed a position paper for Menstruation, WASH and RWSSP -WN (RWSSP-WN Brief 2-2018). The paper underlines that everyone's right to access water, sanitation and hygiene is not possible, if women and girls are denied access during menstruation.

The position paper sets an action plan on how to integrate menstruation related themes in the Project workplans. It is important to start talking about menstruation in all the WASH events to eventually break taboos surrounding the issue.

In spring FY05, the Project launched studies where more information on the matter was collected (RWSSP-WN Briefs 5-,6-,7- and 8-2018). In a study that included 338 female students in five Project municipalities, 23 % of the girls stated that menstruation is a punishment for women and 13 % said that menstruation is a curse from God. In Gaidahawa Rural Municipality (Terai), 96 % of girls said they face restrictions, 32 % are prohibited to use toilets and 57 % are prohibited to use water tap during menstruation.

There are also gaps in health-based knowledge among students but also teachers and Female Community Health Volunteers. For example, 10 % of students (338) think menstruation is a disease and 26 % of students and 25 % of teachers (48) think menstruation is contagious. In total, 42 % of teachers and 27 % of Female Community Health Volunteers (55) think that menstrual blood contains harmful substances. The information collected by the Project is relevant also for the education sector and will be shared with all the stakeholders.

Discrimination that is based on ritual beliefs is hard to fight but there are also many practical factors such as school sanitation that can be easily improved. In spring 2018, RWSSP-WN II organized various reusable pad making workshops at schools and published Menstruation & WASH brochure to be distributed at M-WASH Units. Small but maybe the most relevant change is that now the subject is made visible and discussed in Project supported WASH events. Altogether, the study findings show that there is a lot to do in this regard to ensure real ODF environment where everyone uses toilets at all times and nobody is denied their right to WASH.

Box 4. Celebration for change

Celebration for change

RWSSP-WN II has started celebrating Menstruation Hygiene Day since 2014 in May 28th of each year as an International MHM Day organizing various activities in districts and municipalities. This year to create awareness about MHM at several levels, RWSSP-WN II:

* sponsored female elected members from the Program Municipalities for "National Dignified Menstruation Day Program" which was held at the City Hall of Kathmandu

* Sponsored few Deputy Mayors (female) and WASH staff of Program Municipalities to participate in national level mega event organized by Menstrual Hygiene Management Practitioner Alliance and Department of Water Supply and Sewerage

* Sponsored exhibition stall about Menstruation at Bhirkuti Mandap (Cost sharing with RVWRMP)

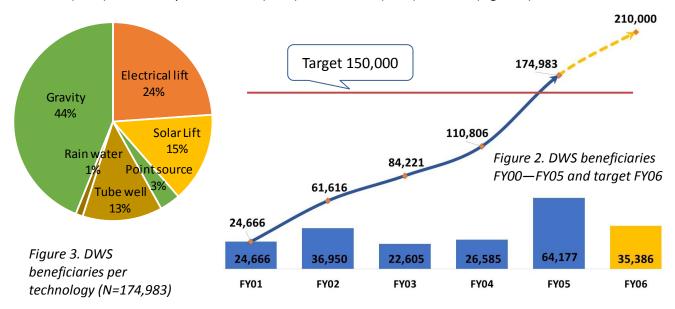

* Sponsored cycle rally organized by X-pose Nepal in Kathmandu

At the municipality level, total 40 municipalities reported Menstruation Hygiene Day related events, including awareness rallies and interaction programmes with Female Community Health Volunteers, mother groups, schools and Municipality WASH-Coordination Committees.

In addition, the Project organized side event at the international conference on "Water, Environment, and Climate Change" 10-12, April 2018 (together with RVWRMP) with menstruation & WASH as one of the key themes.

2.3 Result 2: Access to safe, functional & inclusive water supply services for all achieved and sustained in the project working municipalities

Despite of the difficult working environment due to the state restructuring in FY05, the Project reached the highest result of all time in the number of new completed drinking water supply (DWS) schemes (108) and water supply beneficiaries (64,177). In FY05, the Project exceeded both the target set for the fiscal year (140,000) and the Project end-line target 150,000 (Figure 2). The reason behind the result is the large investment budget that enabled including many schemes in the FY05 work plan. In the end of FY05, there were 66 schemes with "Implementation ongoing" status to be carried over to the next fiscal year. Most beneficiaries of the completed schemes benefit from gravity schemes (44 %) followed by electrical lift (24 %) and solar lift (15 %) schemes (Figure 3).

2.3.1 Post-Construction support

The Project has committed to ensure that all DWS schemes supported by the Project provide functional, improved and safe water supply services. Therefore, the Project provides software and hardware Post-Construction (PoCo) support also to Phase I schemes. By the end of FY05, the Project has provided PoCo support to 385 schemes with 156,571 beneficiaries out of which 56 Phase I and 22 Phase II schemes have received PoCo investment support. In FY05, the Project changed its definition of software PoCo support so that Water Safety Plan ++ is the first step of the PoCo Phase in the Step-by-Step process and if the Plan suggests any improvement works, the Project can allocate investment support. After the state restructuring, the Project is working on a limited area which means many of the Phase I and Phase II schemes were left outside the current working municipalities. With the limited resources, the Project will not go back to those areas, but the corresponding municipalities must take responsibility over any post-construction needs.

Box 5. Municipalities take responsibility over post-construction

Municipalities take responsibility over post-construction

The municipalities have brought state authorities closer to people which enables improved postconstruction support to the communities. There is already evidence that municipalities have supported communities with minor repair needs to keep schemes functional. This is very positive development as previously the lack of post-construction support has strongly hindered the longterm sustainability of rural water supply systems in Nepal (RWSSP-WN Brief 3-2017).

2.3.2 Output 2.1: Schemes with Water Safety Plan++

As per the Step-by-Step process, all gravity, lift and overhead tank schemes with more than three taps receive a Water Safety Plan ++ (WSP++) training. One plus stands for O&M, and the other for climate change adaptation and disaster risk reduction. WSP++ is a tool that focuses on ensuring safe supply of drinking water of high quality with a comprehensive risk assessment and risk management approach. WSP++ covers both short- and long-term O&M issues. Based on the prepared plan, the WUSC can decide on further investment support needs for their scheme.

RWSSP-WN II has provided WSP++ trainings to both Phase I and Phase II schemes. By the end of FY05, 382 Phase I (56 %) and Phase II (44 %) schemes have received WSP++ training. This is 76 % of all the Phase I and Phase II schemes, Phase II has worked with. The current total number of completed gravity, lift and overhead tank Phase I and Phase II schemes with more than three taps is 612 but as many of them are out of the current Project working area, the Project does not have resources to cover them all. See chapter 2.4 for more details.

In FY05 alone, 99 new schemes received WSP++ training. This is a great result which proves that the Municipality WASH Units have been able to conduct trainings independently in their working areas.

2.3.3 Output 2.2: Institutional capacity

RWSSP-WN II practices community-based approach in which communities are made responsible for the planning, implementation, and eventually O&M of their own water supply systems. The Step-by-Step approach emphasizes community participation and capacity building throughout scheme planning and implementation. Various trainings given to WUSCs and water users aim at building their institutional capacities in sustainable scheme O&M. As an outcome, the WUSCs should be inclusive and able to provide sustainable WASH services. All the gravity, lift and overhead tank schemes implemented in Phase II go through the full set of Step-by-Step activities.

Institutional capacity of WUSCs is measured under the following indicators:

WUSC registered and has a statute: Before the local governance restructuring, WUSCs were registered under the District Water Resources Committee. Since the establishment of municipalities, it has not been clear under which institution WUSCs should register. Registration is important for the institutional credibility of WUSC and perquisite for water source registration to avoid any future source conflicts. By the end of FY05, 91 % of applicable WUSCs had registered and had a statute.

WUSC has O&M Plan: As WUSCs are responsible for O&M of their own water supply system, it is important that they prepare a maintenance plan to be followed regularly. Most schemes prepare O&M Plan as part of WSP++ but the Plan can also be a separate document. By the end of the reporting period, 90 % of applicable WUSCs had O&M Plan.

3

Adequate water tariff collected: To ensure scheme functionality, it is important that WUSCs collect regularly water tariff to their O&M Fund. The Fund can be used for maintenance works such as purchase of spare parts and for the salary of the Village Maintenance Worker (VMW). In case of electrical lift schemes, water tariff needs to cover the monthly electricity bill. By the end of the reporting period, 89 % of applicable WUSCs were collecting water tariff.

VMW working: As per the Step-by-Step approach, each scheme should have a VMW who has the main responsibility over day-to-day scheme O&M. The Project trains VMWs in both scheme implementation and in post-construction phases. By the end of the reporting period, 97 % of applicable WUSCs had VMW at work; 81 % of the working VMWs were men and 19 % were women.

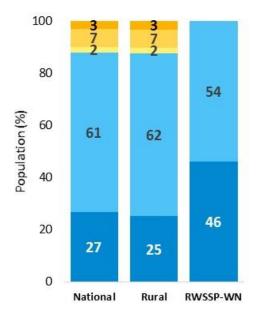

Gender and ethnic balance in WUSC: Nepal National target is to have 33% women and proportional representation of disadvantaged groups in WUSCs. The National target applies to Phase I schemes supported in Phase II. In Phase II, the Project set a higher target to have proportional representation of disadvantaged groups and 50% of women in WUSCs. By the end of the reporting period, 72 % of WUSCs had gender balance, with minimum 33 % women in Phase I schemes and min. 50 % women in Phase II schemes and representatives of all beneficiary ethnic groups. In total, 63 % of WUSCs had gender balance, with minimum 33 % women in Phase I schemes and minimum 50 % women in Phase II schemes, and at least one woman and one representative of disadvantaged ethnicity in a key position.

2.3.4 Output 2.3: Improved services

In the beginning of FY05, RWSSP-WN II changed the way it measures *Improved services* to correspond better with the Sustainable Development Goals (SDGs) (RWSSP-WN Brief 4-2018). Now the scheme service level is measured against the Joint Monitoring Programme (JMP) water supply service ladder. The ladder consists of five service level categories: Safely managed, Basic, Limited, Unimproved and Surface water. The three first categories cover schemes with improved sources (Table 5).

| Table 5. | JMP serv | ice level | ladder |
|----------|----------|-----------|--------|
| | | | |

| SERVICE LEVEL | DEFINITION |
|----------------|--|
| SAFELY MANAGED | Drinking water from improved water source that is located on premises, available when needed and free from fecal and priority chemical contamination |
| BASIC | Drinking water from improved source, provided collection time is not more than 30 minutes for round trip, including queueing |
| LIMITED | Drinking water from an improved source for which collection time exceeds 30 minutes for a round trip, including queuing |
| UNIMPROVED | Drinking water from unprotected dug well or unprotected spring |
| SURFACE WATER | Drinking water directly from a river, dam, lake, pond, stream, canal or irrigation canal |

Altogether, 81% of RWSSP-WN II supported schemes provide piped water supply (gravity, lift and overhead tank schemes), 46% are located on premises (water fetching time ≤5 minutes), 93% provide water supply all 12 months of the year and 91% are free from faecal coliforms. Due to the high number of public connections (66% of the schemes serve through public taps only), only 46% of Phase II beneficiaries (n=251,958)* have 'Safely Managed' schemes (Figure 4). Taken that JMP promotes private connections as safely managed water supply, this is probably the way to go in the future.

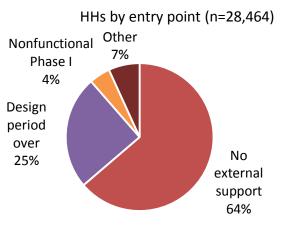

Figure 4. RWSSP-WN II DWS beneficiaries on JMP ladder. National and rural figures are from 2015 as in WHO & UNICEF (2017) Progress on drinking water, sanitation and hygiene: 2017 update and SDG baselines. Available: https://www.unicef.org/publications/index_96611.html

*Users of Phase II and Phase I schemes of all technologies supported in Phase II.

2.3.5 Output 2.4: Reaching the unreached

RWSSP-WN II has an objective to "reach the unreached"; to cover with improved water supply services especially the people that have not benefitted earlier from water supply interventions external to VDC. By the end of FY05, 280 (78%) out of 361 Phase II New, Phase I Carry-Over and Phase I Improved water supply schemes serve previously unserved HHs which means the Project has exceeded its end-line target 260 schemes serving previously unserved HHs. Figures 5 and 6 show the Phase II beneficiaries as per HH category and caste/ethnicity. In total, 64 % of all the Project beneficiary HHs were without previous external support and 70 % of all the Phase II beneficiaries belong to disadvantaged groups

Dalit

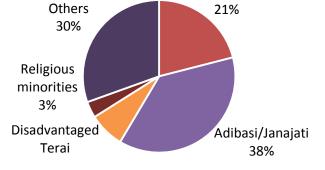

Figure 5. Beneficiaries by caste/ethnicity

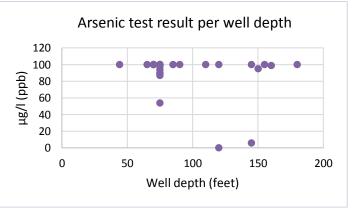

Box 6. Defining the unserved

Defining the unserved

In Terai where most people have shallow tube wells in use, RWSSP-WN II has continued to support deep tube well construction as shallow tube wells are considered vulnerable to contamination. Due to this policy, people with shallow tube wells are considered previously unserved (no external

support). There has been also a common belief that deep tube wells (≥100 feet) are safer from arsenic than shallow tube wells.

In FY05, the Project supported Manari Hand Pump scheme construction in Sarawal Rural Municipality, Nawalparasi. Sarawal is suffering from groundwater arsenic contamination and that is why 27 new tube wells were implemented.

In arsenic tests conducted in spring 2018, only 9 out of the 27 new wells were found deep (\geq 100 feet). Out of the deep wells, only two were found safe and 7 heavily contaminated \geq 50 µg/l (Figure 7). Due to the high arsenic levels in deep wells, people were willing to dig shallow wells as some shallow wells had been found clean in the area. Unfortunately, all the 18 new shallow wells were also found heavily contaminated. People in the area are very aware of water safety, and due to high arsenic concentrations, they would walk from long distance to extract water from the few shallow tube wells that are known safe. The situation is challenging as the same time there is little if any willingness to connect to overhead tanks because that would require water tariff payment.

2.3.6 Output 2.5: Institutional Water Supply

Safe water supply is perquisite for sustainable sanitation and hygiene – school, health post or any other institution without water supply cannot provide hygienic sanitation conditions either. RWSSP-WN II has a focus on covering previously unreached HHs with improved water supply. Still, whenever feasible, the schemes cover also relevant institutions. In FY05, the Project covered 83 new schools, 13 health posts, 31 other institutions and 32 public locations with water supply. By the end of FY05, the Project has covered total 344 institution including 223 schools with 35,332 students, 28 health posts, 41 other institutions and 52 public locations exceeding the end-line target of 300 institutions.

2.4 Analysis on the successes and constraints within the Results area 2

The outcome, the Results area 2 outputs aim to contribute to is *access to safe, functional and inclusive water supply services for all achieved and sustained in the project working municipalities.* This chapter analyses how the outputs have contributed to the outcome.

Table 6 presents the targets set for FY05, the progress within FY05 and the cumulative progress until the end of FY05 (% of end-of-project target) within the Results area 2. The targets for FY05 are based on the Annual Work Plan FY05.

| Indicators | Cumulative target for FY05 (% of end-of- project target) | Achieved within FY05 | Cumulative actual FY05 end (% of end-of- project target) | End of project target |
|--|--|--------------------------------------|---|---|
| DWS beneficiaries | 140,000 (93 %) | 64,177 | 174,983 (117 %) | 150,000 |
| DWS PoCo beneficiaries | 166,000 (83 %) | 27,907 | 156,571 (78 %) | 200,000* |
| 2.1. Water supply schemes that apply a Water Safety Plan with climate change adaptation and disaster risk reduction component. | 100 % of all physically completed schemes | 99 | 382 (76 %) | 90 % of gravity, lift and overhead tank schemes in Program municipalities* |
| 2.2. WUSCs inclusive and capacitated to | | a) 99 | a) 456 (91 %) | |
| provide sustainable services. WUSC defined as inclusive and capacitated fulfils | 100 % of all physically completed schemes | b) 146 | b) 452 (90 %) | 100 % |
| the following criteria: a) WUSC registered and has a statute b) WUSC has O&M Plan | | c) 123 | c) 444 (89 %) | of gravity, lift and overhead |
| c) Adequate water tariff collected d) VMW working e) gender and ethnic balance in | | d) 119 | d) 487 (97 %) | tank schemes in Program |
| WUSC | | e) 54 | e) 361/313 (72 % / 63 %) | municipalities. |
| 2.3. Improved services: # of water supply schemes. Scheme defined as improved and functional when: a) Improved: Piped b) Accessible: located on premises c) Reliability: Available when needed (all 12 months) d) Quality: free from microbial contamination | a) no target b) no target c) 100 % of all physically completed schemes d) 100 % of all physically completed schemes | a) 510 b) 264 c) 539 d) 528 | a) 510 (88 %) b) 264 (46 %) c) 539 (93 %) d) 528 (91 %) | a) 572 b) 319 c & d) 100 % of all physically completed schemes |

Table 6. Project achievements within Results area 2

| Indicators | Cumulative target for FY05 (% of end-of- project target) | Achieved within FY05 | Cumulative actual FY05 end (% of end-of- project target) | End of project target |
|--|---|-------------------------|---|--------------------------|
| 2.4. Reaching the unreached: # of water supply schemes reaching the unreached (previously unserved by improved water supply supported by interventions external to VDC). | 255 (98 %) | 85 | 280 (108 %) | 260 |
| 2.5 Institutional water supply: # of schools and institutional/public locations that have safe and functional water supply with accessible water points to all users. | 200 (67 %) | 159 | 344 (115 %) | 300 |

Green=on track, yellow = almost there, red=special attention needed

*Achieving the target is dependent on the additional EUR 500,000.

By the end of FY05, RWSSP-WN Phase II time elapse has been 5/6 (83 %). In FY05, the Project had the largest investment budget of all times that is shown in the results: by the end of FY05, the Project has exceeded the end-line targets for drinking water supply beneficiaries, schemes serving previously unserved HHs and institutional water supply. In FY05, the Project made large progress also regards to WUSC institutional sustainability and improved water supply services. The results prove that it was the right decision to establish WASH Units at the municipality level – the year resulted in the highest progress in the Project history.

When it comes to post-construction support, the Project will not be able to fulfil the initial target of providing software support (WSP++ training) to all Phase I and Phase II gravity, lift and overhead tank schemes with more than three taps. This is because 42 % of the schemes without WSP++ (99) are now located outside the new Project working municipalities. By now, in the whole Project area, 56 % (674) of all applicable schemes have received WSP++ training and 44 % remain to be covered (including 62 IPO schemes). In FY06, the Project has set a WSP++ target to cover 149 new schemes (in case the Project will work in 50 municipalities). If the target is fulfilled, by the end of FY06, the Project would cover 90 % of all FY06 working area and 86 % of all applicable schemes with WSP++. For FY05 progress figures, the number of WSP++ schemes is compared to the total number of applicable Phase I and Phase II schemes the Project has worked with FY00—FY05.

When it comes to institutional capacity of WUSCs, the progress under the gender and ethnic balance indicator is lacking behind other institutional capacity figures. Gender and ethnic balance in WUSC and other committees such as WSP++ team is promoted through many steps of the Step-by-Step process. Still, only the number of women or ethnicities in different WUSC positions does not tell enough of the reality: are they actively participating in the meetings and do they feel empowered by their position. The Project will study perceptions of WUSC members in more detail in FY06. *Box 7. Recharge technologies in RWSSP-WN II schemes*

Recharge technologies in RWSSP-WN II schemes

By the end of FY05, 80 RWSSP-WN II schemes include recharge structures in their design: 29 schemes include recharge ponds, 34 schemes recharge pits, 15 schemes check-dam structures and 25 schemes plantations. The total number of recharge ponds constructed is 40 (as part of scheme design) in addition to which 22 ponds have been constructed as schemes of their own. In FY05, 17 new recharge ponds were constructed.

Box 8. From V-WASH Plans to M-WASH Plans

From V-WASH Plans to M-WASH Plans

Before the state restructuring, water supply schemes supported by the Project were selected in Village Development Committee WASH Plans (V-WASH Plans) that prioritized schemes in most need. Now, most of the municipalities cover various VDCs within their borders with several blank areas (not all the previous VDCs had V-WASH Plan). Therefore, the old V-WASH Plans are not accurate enough (and updated!) to be used as the main WASH planning tool in the municipalities.

In spring 2018, RWSSP-WN II piloted Municipality WASH Plan preparation in Harinas Rural Municipality, Syangja. The Project took a new innovative approach to the planning process – the field data was collected using smartphone-based KoBo Toolbox application that is a very fast and flexible data collection method but also enables presenting the data on a map as well as in a table format. The visual presentation of data makes it easier to the local communities to analyse the data and spot any errors. What was also new, was that the data was collected on HH level instead of scheme level. This enables more accurate analysis on unserved HHs, scheme functionality as well as harmonization with the SDG indicators (JMP service level analysis requires HH level data).

To ensure democratic and transparent planning process, all municipality wards organized first their own ward-level planning meeting after which the municipality collects the ward plans are prepares Municipality WASH Plan (M-WASH Plan). The pilot proved that it is crucial that the new municipalities prepare fresh municipality level WASH plans: the analysis showed that even within served areas with safely managed water supply systems, there are still several unserved HHs. Based on the experience, the Project can heartily recommend the method to be copied in other municipalities as well.

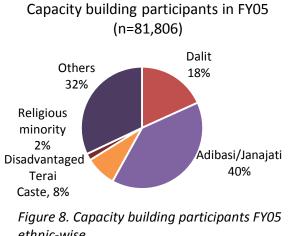

2.5 Result 3: Strengthened institutional capacity of government bodies

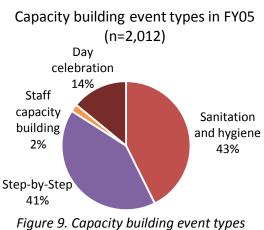

RWSSP-WN II has an objective to strengthen the institutional capacity of government bodies to plan, coordinate, support and monitor WUSCs in the implementation and O&M of their WASH services in a self-sustainable manner. RWSSP-WN II faced remarkable changes in its operational environment in the first half of FY05. A new federal structure was established in Nepal and several elections were organized first at the municipality level in May 14 and June 28, and then at the provincial and parliamentary level in November 26 and December 7, 2017. The changes affected RWSSP-WN II strongly as the project was deeply embedded in the former local governance units: DDCs and VDCs. In FY05, the Project transferred to the municipality level and established 55 Municipality WASH Units (M-WASH Units) in 12 districts as the main units to run the Project activities. In addition to the M-WASH Units, the Project operated in 7 Sanitation program municipalities (for sanitation program only), 23 Support municipalities (for public construction schemes only) and 14 Technical Support Units (TSUs) under DCCs.

FY05 was a challenging year in many ways: it took until the end of October that the Project had signed Memorandum of Understandings (MoUs) between all the new working units and DoLIDAR. The same time, due to the elections code of conduct, recruitment in the municipalities was prohibited and it took a long time to fulfil all the staff positions to start running the Program fully. This was the first year of the municipalities to run their own program (of which approximately only the 6 last months were active). Despite of these challenges, both physical and financial progress of FY05 is better than ever in the Project history which proves that transferring to the municipalities were ready to run a program of this kind; the results prove that it was worth the effort and this is the way to continue.

2.5.1 Capacity-building events and beneficiaries

Large part of the everyday work of a WASH programme is organizing different events, workshops and trainings to contribute to the Project objectives. In FY05, these events were mostly organized by the M-WASH Units independently or with the support of TSU, PSU and PCO. In FY05, the Project reached 81,806 beneficiaries in 2,012 capacity building events. This is 9,872 beneficiaries more than in the previous FY. In FY05, 53 % of all the capacity building participants were women and 47 % were men. The ethnic/caste groups of FY05 capacity building participants are presented in Figure 8 and the event types in Figure 9. By the end of FY05, altogether 298,070 people have benefitted from the Project funded capacity building events and the Project has exceeded its end-line target 250,000.

ethnic-wise Box 9. Education matters

Figure 9. Capacity building event types in FY05

Education matters

Three studies about Sanitation (n-1093 of which 628 female), Handwashing (n-918 of which 524 female) and Menstruation (n-755, all women) conducted in FY05, revealed interesting information related to education:

The total sample is 2,766 of which 69% female. While there may be some individuals who were interviewed for two surveys (for instance, toilet use and hand washing), the sample is large, so a margin of error can be added to the following still having significant confidence in the findings.

How many years did you go to school? There were two options: did not go to school but can read and did not go to school and cannot read.

Out of all 2,766 respondents:

- * 50% had not been to the school: 52% of all female and 48% of all male respondents.
- * 24% were illiterate: 26% of women and 21% of men.
- * only 15% had > 10th grade School Leaving Certificate (S.L.C.): 16 % of women and 13 % of men.

Out of all 418 persons who passed >10 S.L.C., 73% were women but this may be explained by having more women in the total sample in the first place. Out of all female respondents, 16% passed > 10 S.L.C. Out of all illiterate who did not go to school, 73% were women.

The result shows that the Project must pay increased attention to the education material it prepares and distributes but also to the contents of different orientation and training events; if the audience is partly illiterate, it is useless to use text-heavy Power Point presentations. Finally, Day-Celebrations, workshops and other practical learning-by-doing capacity-building events might be the best ways to reach target groups of all backgrounds.

2.5.2 Output 3.6: Studies relating to service delivery and sustainability

In FY05, RWSSP-WN II published more studies than in any other year before. In autumn 2017, the Project published five articles in the annual journal by the Society of Engineers for Rural Development (SERDEN). The Journal is circulated across the engineering community working in the rural development including different Ministries and Engineering Departments in Nepal. April 10-12, 2018, RWSSP-WN II participated in international conference on "Water, Environment and Climate Change: Knowledge Sharing and Partnership" (WECC) by the Society of Public Health Engineers Nepal (SOPHEN) in Kathmandu. RWSSP-WN II presented three papers in the conference (listed in Box 11 and found at the Project website). In addition, the Project organized a side event together with the Rural Village Water Resources Management Project (RVWRMP) with the theme "Working with people for clean and healthy village".

The Project published 9 new studies in its Brief-series and a new brochure "Menstruation and WASH" (all found at the Project website). In autumn 2017, the Project published "Human Resource Mobilization Guideline for Municipality WASH Unit & Technical Support Unit" to guide the work of the newly established M-WASH Units and TSUs. In autumn 2018, the Project updated also the Stepby-Step manual and the Procurement brochure to correspond with the new working environment. All 21 FY05 publications are listed in Box 11.

In FY05, the Project web-site was continuously updated, with total 4 blog posts. Since the website visitor counter was launched on 20.12.2015, there has been 36,726 visitors as of 7.8.2018. In FY05 only, the number of website visitors was 9,021. Joint newsletter in Finnish language by RWSSP-WN and RVWRMP was sent in January and June 2018 and a joint Twitter and Instagram accounts were used to inform audience about new publications and other news.

Box 10. From outcomes to impacts

From outcomes to impacts

RWSSP-WN II has explored approaches to capture purpose-level impacts of its work. In FY05, the Project studied 100 lift schemes (38 electrical and 39 solar in Hill and 16 electrical and 7 solar overhead tanks in Terai) that had been in operation for at least 12 months at the time of survey.

One question considered time use: how long it took to fetch water (go-wait-fetch-return) in average within the scheme beneficiary HHs before the scheme was completed, and how long it takes now after the scheme completion. There were total 10,384 HHs with total population of 54,554, from which we can count 5.25 persons per HH, and from this, that each HH should do at least five daily trips to fetch water (one trip per one person and 25–30 litres per trip).

Now taking median from each time category and assuming 5 trips per HH, and then deducting the situation after and before the scheme was completed, it is concluded that each day the total time saving is 19,241 hours in these 100 schemes. This is mostly women's time. Every day!

2.5.3 Output 3.7: Municipality WASH Units with established and operational policies and procedures for participation of local communities in water and sanitation management

Since FY05, RWSSP-WN II is implemented through municipalities to strengthen their capacities in providing sustainable WASH services. The main responsibility of grassroot level Project implementation is with the M-WASH Units, led by municipality hired WASH Coordinator. M-WASH Units operate under the Municipality WASH Management Committee under the leadership of the elected Municipality Chairman. The roles and responsibilities of the municipality are defined in the MoUs and in the Human Resources Guideline, all available at the project web-site in both English and Nepali. TSUs support the M-WASH Units as well as Sanitation and Support municipalities where there

are no M-WASH Units. WUSCs continued to have the leading role in individual water or sanitation scheme planning, implementation, procurement and later, operation and maintenance but the M-WASH Unit is the responsible unit to support WUSCs in this work.

Since the Project working modality changed in the beginning of FY05, a new indicator was introduced to measure the functionality of M-WASH Units. M-WASH Units are considered operational if they can plan, implement and report their WASH Programme, verified by four indicators:

Municipality WASH Unit's Monthly Progress Report: In the beginning of FY05, the Project shifted from 14 districts to 99 working units. This created a challenge for both monitoring and reporting: how could both PSU and PCO follow that the program was implemented in a timely manner. To monitor the large number of units, the Project developed a cloud-based (Google Drive) monthly reporting system that was used for both planning and reporting purposes, and that could be accessed by several persons. All WASH Coordinators as well as District WASH Advisers and District Project Officers were trained to use the format and they received feedback on their reporting performance throughout the year.

In the end of FY05 it can be said that the reporting method proved to be a failure as many municipalities failed to report on a monthly basis, some even on a trimester basis. After the closing of FY05, 21/55 (38 %) of the M-WASH Units had not updated their report and 10/55 (18 %) had updated their report last time four months back in Falgun when they were forced to do it for the DoLIDAR 2nd trimester reporting. Altogether it can be concluded that 55 (let alone 99) units is a number too big to be actively followed in PSU and PCO. Initially, the plan was that the District WASH Advisers and District Project Officers would act as a filter and follow the reporting of their corresponding areas, but this worked only partially. In FY06, the Project will simplify the reporting template so that it lets less chance for errors and is more easily followed.

Municipality WASH Unit's Monthly Workplans and staff monthly time sheets: M-WASH Unit staff is not employed by the Project but by the municipality with the financial support of the Project. In the previous modality, the field level staff were under direct control of the District WASH Advisor/District Project Officer, but this is not the case anymore. This has caused accountability issues in some municipalities as in practice, the M-WASH Unit staff are not accountable to the Project but to the municipality. It is thus the municipality that must follow the staff work plans and timesheets and in practice the M-WASH Unit staff should not receive salary without submitting their monthly time sheet to the municipality administration. The municipality monthly report format included a monthly work planning template for Project related activities which was updated regularly by 45 out of 55 (82 %) municipalities.

Municipality WASH Unit Financial Statement from the Accounts Section: Given that the Project was **the** first to channel its fund flow through the municipalities accounts, transparent and systematic book keeping was a non-negotiable principle from the beginning. In many municipalities the accountants were new or temporary, such practices as using accounting software differed, and the accounts sections in general missed practical guidance and face-to-face support in how to manage in the new setting. For us, the expectation that the municipalities themselves could effortlessly report their finances was one of the core indicators. As it turned out, the Long-Term Experts, especially the District WASH Advisers as well as the Chief Admin and Accounts Officer provided time consuming input in helping the accountants in producing such as *Phatwaris*, the financial statements following the Nepal government practice. This indictor was not a success, the reports did not come automatically.

Municipality WASH Unit Event Report which shows the GESI aspect of participation: In FY05, the reporting on capacity building events and participants was done using the Google Drive based monthly reporting format. At first many errors were found in the capacity building reporting but all 55 M-WASH Units improved throughout the year and finally they were able to submit detailed reports. In the new setting, the rule is that if the M-WASH Unit staff can collect participant signatories in a capacity building event, the event qualifies to be reported. In FY05, the number of capacity building events organized is bigger than ever in the Project history, which is largely explained by the large number of units organizing events. The Project continues to use the same event reporting format also in FY06.

2.6 Analysis on the successes and constraints within the Results area 3

The outcome, the Results area 3 outputs aim to contribute to is strengthened institutional capacity of government bodies to plan, coordinate, support and monitor WUSCs and other community groups in the implementation, operation and maintenance of domestic water, sanitation and hygiene programmes in a self-sustainable manner. This chapter analyses how the outputs have contributed to the outcome.

Table 7 presents the targets set for FY05, the progress within FY05 and the cumulative progress until the end of FY05 (% of end-of-project target) within the Results area 3. The targets for FY05 are were revised in AWP FY05.

| Indicators | Cumulative target for FY05 (% of end-of- project target) | Achieved within FY05 | Cumulative actual FY05 end (% of end-of- project target) | End of project target |
|--|--|-------------------------------|---|--------------------------|
| Capacity-building beneficiaries | 220,000 (88 %) | 81,806 | 298,070 (119 %) | 250,000 |
| 3.6 Studies relating to service delivery, sustainability and related mechanisms | 65 (93 %) | 21 | 77 (110 %) | 70 |
| 3.7 Municipality WASH Units with established and operational policies and | Municipality WASH I Municipality WASH I monthly time sheets | | | |
| procedures for participation of local communities in water and sanitation management | Municipality WASH Accounts Section | All working municipalities | | |
| | Municipality WASH Unit event report which shows the GESI aspect of participation | | | |

Table 7. Project achievements within Results area 3

Green=on track, yellow = almost there, red=special attention needed

FY05 was the first year the municipalities were functional, so it is understandable that they faced various challenges. While in times of the semi-annual reporting still 65 % of M-WASH Units lacked dedicated space in the Municipality Office, in the end of FY05, only one out of 55 missed office space. Six months back, only 53 % of M-WASH Units had computer in use but by the end of the year all did even though 22 % of M-WASH Units still missed internet connection. Six months back, still 32 % of WASH Coordinators lacked confidence in using Microsoft Office software (needed in monthly reporting) but in the end of the year, only 13 % did.

Regarding M-WASH Unit functionality, in FY05, biggest challenges had to do with reporting and especially with financial reporting. This is because not only M-WASH Units but also municipality account sections started to work with little preparedness to conduct the works that belong to them. Many accountants had problems using an accounting software and they could not handle payments and provide financial statements to M-WASH Units. This challenge has required a large amount of

patience and involvement from WASH Coordinators, District WASH Advisers and District Project Officers but from PSU and PCO alike. The Project supported municipality accountant trainings but clearly one training was not enough to fill the capacity gaps and the municipality accountants have needed intensive support all year through. On the other hand, supporting the municipality account section is the best possible capacity building the Project can give to the municipalities as it benefits not only WASH but all activities under the Municipality from education sector to agriculture.

One evident improvement that came with the state restructuring is the increased ownership of local government in the Program. In FY05, municipality chairpersons and vice-chairpersons participated actively in scheme monitoring and other Project related events. The record high municipality investment in the FY05 workplan shows that there is ownership and the municipalities find the program meaningful. Now, when the Project must face out from some of the municipalities, many of them have shown interest in continuing the cooperation and a few of them have even shown interest in continuing M-WASH Units independently. The future goal is that M-WASH Units would not serve only one project, but all WASH activities funded from different channels and implemented under the municipality.

3 HUMAN, FINANCIAL AND OTHER RESOURCES

3.1 ASSETS, EQUIPMENT AND OTHER FACILITIES

Offices and Facilities: The Project rents one main office building in Pokhara that includes both PSU and PCO. In addition, the project has one Guest House in Pokhara and it shares the costs of one Guest House & Office in Kathmandu with RVWRMP. The project rents two residential buildings for the international long-term experts, and two rooms and parking space in Butwal for the Terai based vehicle and logistics (one room for the driver, one room for store). In the districts, the District WASH Advisers continued to have offices hosted under DCCs. All districts have internet connections and data packages through smart phones. Costs related to these facilities are shared with DCCs. It is unlikely that this practice can continue over the coming year given the role of DCCs and the fact that they cannot channel and manage this kind of budgets anymore. During the last year of Phase II an increasing number of District WASH Advisers will have to be mobilized from PSU.

Assets and Equipment: The RWSSP-WN Phase I handed over all its assets to Phase II. The Phase I to Phase II Handing Over Documents include a list of major equipment and assets; all these are updated in the store database as new items are being procured. Due to the continuous update of the store and fixed assets database, an inventory report is available at any time. The physical store verification inventory is completed at the end of FY, and as usual practice.

Vehicles: The project has five vehicles (Nissan Patrol GL-4WD Station Wagon). These vehicles are increasingly in need of maintenance and the cost is expected to raise as the time goes by as all five vehicles are in constant heavy use, often off-road. Additionally, the districts continue to hire short term rental vehicles for individual local trips as needed. In many districts, also the DCC vehicles are used. Phase I also handed over seven motorcycles (Yamaha Gladiator 125 cc) and one scooter.

3.2 HUMAN RESOURCES

3.2.1 GoF funded human resources

RWSSP-WN II Technical Assistance team (Long Term Experts) includes Chief Technical Adviser, Field Specialist, Chief Administrative and Account Officer, Sanitation and Hygiene Specialist, Social Development Specialist, Water Supply Technical Specialist, Management Information Systems Officer and eight District WASH Advisers. The Long-Term Expert team role was crucial in rolling out the programs in the newly established municipalities. The team has facilitated the Municipality WASH Management Committees to get themselves established and operational together with the M-WASH Units as agreed in the MoUs that were signed at the start of FY05, and as further described

in detail in the "Human Resource Mobilization Guideline for Municipality WASH Unit & Technical Support Unit" approved by the 11th Supervisory Board meeting in September 2017.

In addition to the above, the project hires staff, interns and enumerators through its TA-funded *Capacity building and governance*-budget and *Evaluation and Monitoring* -budget. The summary is presented below in Table 8 where one person month (p/m) equals to 21 working days. Due to record high investment budget that encouraged the municipalities to start a large number of schemes, the staff has exceeded their p/m targets due to long monitoring trips. The aim is to balance this out with the substitute leaves over the calendar year (CY) 2018, aiming to 10.5 p/m per staff member by the end of CY2018. **Annex 6 Table A** provides the list of all human resources involved with the RWSSP-WN Phase II from the beginning, indicating also the source of funding for each case, and **Annex 6 Table B** shows the details for the TA-funded long-term and short-term experts planned and actual person months post-wise, with total planned and actual for FY01—FY05, and as planned for the final year.

| Staff position | # FY05 | FY01 * | FY02 * | FY03 * | FY04 * | FY05 * | FY06 | % ** | Total |
|-------------------------------|-----------|-----------|-----------|-----------|-----------|-----------|------|---------|-------|
| Long Term International | 2 | 23.6 | 29.4 | 30.1 | 21.5 | 21.2 | 14.5 | 92% | 137.1 |
| Long Term National PSU | 4 | 39.2 | 71.1 | 76.7 | 61.9 | 53.7 | 47.5 | 88% | 345.0 |
| Long Term National District | 8 | 39.2 | 109.2 | 114.1 | 101.9 | 92.1 | 76.0 | 86% | 529.5 |
| Short Term International Exp. | 0 | 1.0 | 2.0 | 2.9 | 1.1 | 0 | - | 100% | 7.0 |
| Short Term National Experts | - | 1.0 | 8.4 | 8.1 | - | 0 | - | 100% | 17.5 |
| Home Office | 1 | 11.0 | 12.0 | 12.0 | 12.0 | 12.0 | 12.0 | 83% | 71.0 |

FY05: number of staff at the end of FY05

* Actual person months utilized

** % actual / available for FY01-FY06, consider actual utilized and p/m available for final year Note: MIS Officer from the PSU-based Long-Term experts is included into the 'Long Term National District' group in the above table; correction from the earlier tables

3.2.2 GoN funded human resources

In addition to the TA team staff, there are also inputs from the National Project Director (30 %) based in DoLIDAR in Kathmandu as well as National Project Coordinator (100 %), two engineers, one computer operator and one cleaner based in PCO in Pokhara. In addition, there is an Accountant working for PCO. **Annex 8 Table A** provides the names of the GoN team. In addition, the Director General and other staff from DoLIDAR, as well as the MoFaGa Secretary, Joint Secretaries and Under Secretaries, participate in monitoring visits and in Steering Committee and Supervisory Board meetings.

3.2.3 Municipality WASH Fund human resources

The human resources hired by the local governments for the Municipality WASH Units are critical for achieving the project results. This staff need to be carefully recruited, oriented and mobilized. Since this was the first year for the M-WASH Unit, and since the election code of conduct postponed recruitment, many districts remained under-staffed over most of the year. Table 9 summarizes the total situation, **Annex 6** showing the municipality-specific situation at the start of FY06. The total actual staff in M-WASH Units is 209 out of expected 236 (89%).

Rolpa and Arghakhanchi districts continued to hire District Project Officers, over FY05 still hosted under DCCs. Over the coming year their budget will have to be channeled through municipalities that have agreed to host them. At the time of writing this report their position is increasingly difficult as it is still unclear whether they can continue supporting several municipalities while their contract is with one, and this is also not the same municipality as where their present offices are located.

| DP | 0 | WAS Coordi | | WASH Fa | acilitator | Engir | ieer | Sub-Eng | jineer | Water Sup Sanitat Technic | ion |
|----------|--------|---------------|--------|----------|------------|----------|--------|----------|--------|---------------------------------|--------|
| Required | Actual | Required | Actual | Required | Actual | Required | Actual | Required | Actual | Required | Actual |

Table 9. Number of M-WASH Unit staff as of 15/07/2018

3.3 FINANCIAL RESOURCES

3.3.1 Overview to budget

The total RWSSP-WN Phase II budget as presented in the Annual Work Plan FY05 table 5. In this table, the total was EUR 26,022,972 taking into account the additional investment funds from the two governments (EUR 1 million each) and the GoF carry over funds from the Phase I (NPR 19,891,827.49 distributed across various districts; with the rate 115 equals to EUR 172,972, the rate representing the situation in September 2013). The forthcoming Annual Work Plan FY06 will present the final Phase II total budget taking into account the more than expected actual contributions from both the local governments and the users themselves, as well as the additional commitments from GoN.

The total budget has increased significantly from the original Project Document budget of EUR 21.9 million. The actual contributions from the users was expected to be 25% within the water supply investment, the actual contributions at the end of FY05 and the remaining commitments in the ongoing schemes exceeding EUR 4 million (instead of original expected EUR 1.55 million as given in the original Project Document). Similarly, the local governments contributions were expected to be EUR 765,000, now increased to EUR 2 million. Annex 5 Figure 5 gives the result (component) wise actual annual contributions FY01 – FY05. Table 10 gives an overview of the budget and actual expenditure in FY05. This table was presented in the AWP FY05 (table 2 Budget summary), updated for the actual figures.

| GoN Red Book | Budget | Released | Actual expenditure | Carry over or (frozen) |
|-----------------------------------|-------------|-------------|--------------------|---------------------------|
| GoN in Red Book through MWFs& PCO | 373,106,000 | 365,985,433 | 344,245,991 | (28,860,009) |
| GoF in Red Book through MWFs | 189,621,000 | 176,888,330 | 162,258,421 | 14,629,909 |
| Municipalities through MWFs | 87,563,560 | 83,090,627 | 73,229,340 | 9,861,287 |
| Total through MWFs & PCO (NPR) | 650,290,560 | 625,964,390 | 579,733,753 | 46,230,637 |
| GoF (through TA accounts) (EUR) | 1,145,168 | | 1,011,845 | |
| GoF total new funds in FY05 (EUR) | 2,605,290 | | 2,298,304 | |

Table 10. Budget summary FY05 with actual utilization (EUR, NPR, %)

* Carry over funds returned from DDCs to the same account in Pokhara from where they were sent. 100% was returned. EUR:NPR rate 115 used in AWP FY05; EUR:NPR rate calculated from total GoF EUR released and corresponding exact NPR received over FY05, (123.2037725).

3.3.2 Municipality WASH Funds

The investment budgets over the FY01 to FY04 were channeled through the District Development Funds (DDFs) in each district. From the start of FY05 the fund flow was directed through the Municipality WASH Funds (MWFs). The GoN Red Book shows these budgets for each FY by both GoN and GoF, and the recurrent costs of GoN include also PCO. GoN deposits its contributions on trimester basis: 15%, 60% and 25% in Trimester 1, Trimester 2 and Trimester 3, respectively. The GoF contributions are available on demand at any time. The local governments at municipalities deposit

their contributions directly to each MWF; these are not included in the Red Book. The users deposit their contributions directly into the relevant WUSC accounts. PCO presents these in the GoN Trimester and Annual Progress Reports. PSU maintains the financial records in detail as reported by the District WASH Advisers/Project Officers who now compile the reports from the municipalities into one district collection that shows both the individual municipalities as well as district summaries.

PSU and PCO monitor each MWF twice per year through a participatory process when possible shortcomings can be corrected immediately. This year this has been a highly valuable and appreciated practice in the municipalities where many accountants were operating the new system for the first time. While the monitoring was an opportunity to get the project fund related vouchers in order, it was an opportunity for the municipality accountants to organize their other vouchers and practices at the same time, and to get one-to-one support with their accounting software.

The FY05 total budget as in the GoN Red Book was NPR 562,727,000 (EUR 4,893,278)¹. This included the contributions from GoN and GoF only, into the scheme investments, capacity development, governance and GoN administrative costs and PCO. With the municipalities' contribution, the total budget was record high at 650,290,559 (EUR 5,286,915). There were no carry over funds in FY05 given the new set up, and the DDCs were requested to return their non-utilized GoF funds back to the same account in Pokhara from where they were originally sent (total NPR 20,577,835 of which after bank charges NPR 18,484,952 was received and released to the MWFs), see **Annex 5 Table 2.**

Figure 10 shows the overall situation by the main contributions (GoN + GoF + municipalities). Here GoN and GoF budgets refer to the total Red Book budget in NPR. The following Figure 11 shows how this compares with the previous fiscal year: in all accounts the percentages are better even if the budget was over EUR 800,000 more. We can consider this an excellent result.

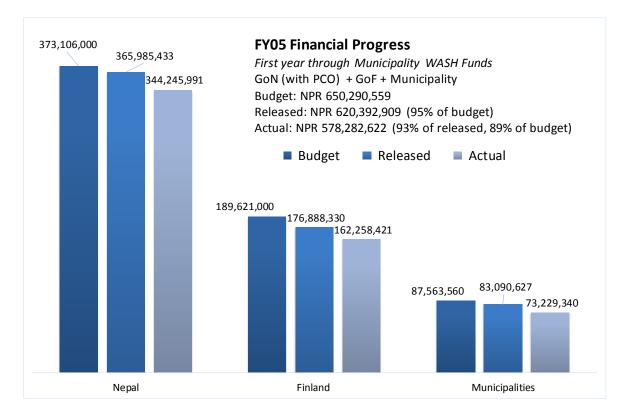

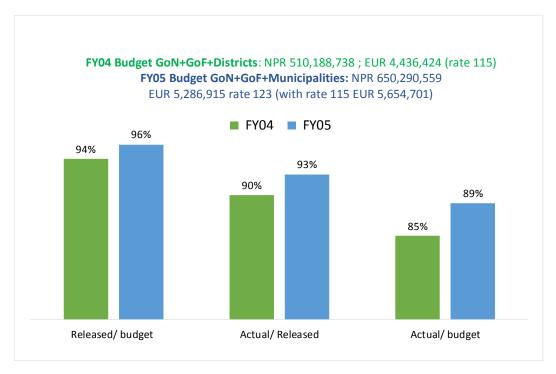

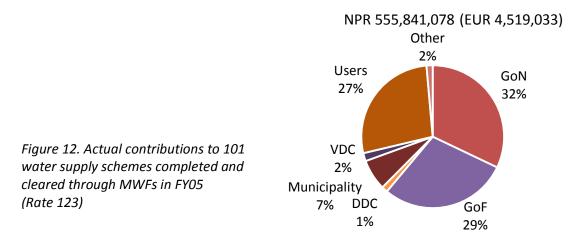

Figure 10. Investment budget, released & expenditure by GoF, GoN and municipalities in FY05 (NPR)

¹ Rate 115 used in Annual Work Plan FY05; this Progress report utilizes rate 123 which represents the rate when dividing the total NPR with the total EUR sent from GoF over the FY05.

The contributions for DWS schemes from the users themselves are made through WUSCs under the Public Construction heading. Figure 12 shows the contributions, worth total EUR 4,519,033, made during FY05. The users' contributions exceed all expectations: considering the value of the in-kind contributions, the users' contribution is close to the GoF contributions within 101 water supply schemes that were completed and cleared during the reporting year alone. These contributions are cleared during the preparation of the final Measurement Book where all contributions, including in kind, are measures and valued for the financial clearance.

3.3.3 Government of Finland contributions

TA budget (GoF only) flows through the accounts of the TA consultant FCG International Ltd. The Consultant's Home Office in Helsinki, Finland, reports directly to the Ministry for Foreign Affairs of Finland, on a monthly basis. GoF contribution covers the following: the fees associated with the international and national short-term and long-term experts; monitoring, plans and studies; capacity building and governance; operational costs including running costs and TA related reimbursable costs. Out of the different budget headings, there is no overhead under any other item expect the consultant fees. GoF through TA funds keeps the offices of PSU and PCO and to a certain extent, also District WASH Advisers running, including the salaries of the support staff and drivers, costs related

to the utilities and vehicles, any new procurement, and various costs related to PCO including per diems, travel costs and office costs.

Considering GoF contributions through both MWFs and TA accounts over the entire FY05, the total GoF budget was EUR 2,605,290. Total new EUR 1,286,459 was released to MWFs. TA budget (GoF only) refers to the funds channeled through the TA consultant's accounts. The currency fluctuations influence the GoF contributions to MWFs in EUR. The total budget through TA accounts for FY05 was EUR 1,145,168 of which 88% was utilized. Table 11 summarizes the main budget headings, with reference to the AWP FY05. See also Figure 3 in **Annex 5**.

| Table 11 GoF FY05 and cumulative FY01—FY05 actual expenditure vs total Phase II budget as in the |

| AWP FY05 (EUR) |

| | | FY05 (CY2017/18 - 2074/75) | | | Cumulative | | |
|----|--|----------------------------|-----------|-------------------|------------|------------------------|-----------------------------|
| | Cost item | Budget | Actual | Actual/ budget | Actual* | % of total Phase II | Total Phase II budget |
| | Total through local funds (MWFs) | 1,460,122 | 1,286,459 | 88% | 7,058,769 | 95% | 7,444,700 |
| 4 | Technical Assistance (TA) | 737,935 | 666,024 | 90% | 3,892,561 | 78% | 5,000,000 |
| 4a | TA International including Home Office | 236,784 | 242,034 | 102% | 1,605,517 | 89% | 1,806,212 |
| 4b | TA National (districts & PSU) | 301,151 | 346,968 | 115% | 1,819,399 | 86% | 2,114,171 |
| 4c | Reimbursable TA Costs | 200,000 | 77,022 | 39% | 467,645 | 43% | 1,079,617 |
| 5 | Running Costs | 236,000 | 214,450 | 91% | 1,020,385 | 85% | 1,200,000 |
| 6 | Capacity building & Governance (TA) | 131,233 | 102,634 | 78% | 564,702 | 95% | 593,300 |
| 7 | Evaluation & Monitoring | 40,000 | 28,737 | 72% | 81,538 | 54% | 150,000 |
| | Total through TA | 1,145,168 | 1,011,845 | 88% | 5,559,185 | 80% | 6,943,300 |
| 10 | Grand total | 2,605,290 | 2,298,304 | 88% | 12,445,955 | 82% | 15,200,000 |

Over the year, total number of 379 MWF related vouchers were processed through the account in Pokhara by PSU while transferring funds to the MWFs. Total NPR 160,112,730 (EUR 1,286,458) was requested, and total NPR 176,981,534 received and processed. Out of this, NPR 78,125 (0.04%) was bank charges, and total NPR 176,888,330 released to MWFs. This tallies exactly with the records received from the municipalities. The actual expenditure was NPR 162,258,421. Those municipalities that are not included in the Red Book for FY06, will have to return their balances back to the account in Pokhara.

Until the end of FY05, the *capacity building and governance* budget heading has covered the districtbased Technical Facilitators, one WSP Facilitator, and one Water Supply Technician focusing on technical trainings, all being in high demand, as well as such as PCO, Supervisory Board meetings, visibility-related contributions such as SERDEN Rural Infrastructure Journal, DoLIDAR Day, Engineers' Day, WECC conference in Kathmandu as well as such joint events as District Accountants training organized together with MoFAGA. The Monitoring and Evaluation sub-budget has covered the costs related to one WSP++ Engineer and the National Field Specialist, as well as data enumerators (including interns) and water quality testing as it has related to various studies.

4 ASSUMPTIONS AND RISKS

The Project Document presents the major risks and risk management procedures in its **Annex 3**. These have been further elaborated in the Inception Report, and then again in each Annual Progress Report and Annual Work Plan. Table 12 captures some recent highlights (**Annex 7**).

| Table 12. | Risks and | assumptions | - hiahliahts |
|-----------|---------------|-------------|--------------|
| 10010 121 | 1110110 01110 | assamptions | mgninginco |

| Risk, Assumption (as in Project Document) | Suggested Project action and status update |
|--|---|
| <i>General</i> : Since the final date for local elections are not confirmed, all the political parties had committed to conduct local election within one year of second Constitutional Assembly poll. () Possible rearrangement of country in federal states, possible political instability. <i>Assumption</i> : consequences of a new constitution, new administrative structures and political instability are not substantial and can be dealt with the project set-up and budget | Local elections were held, resulting in major changes in the local governance structure. The Finnish supported bilateral water projects were the first ones that have gone ahead by re-defining the WASH institutional structure at the municipal level, shifting all operations and fund flows from district level to municipality level. RWSSP-WN II overall objective and purpose remain valid, similarly Results 1 and 2 with some modifications on how to set targets, adjusting 'VDCs' and 'Districts' (Annex 1.) Result area 3 is increasingly valid, the municipalities now being the kind of local administrative unit that has both the elected members and authority to make their own decisions. The indicators were revised accordingly and aligned with SDGs. At the start of the reporting period, new MoUs were signed by DoLIDAR and total 98 local units for the Project implementation. The MoUs define the roles and responsibilities, introducing M-WASH Unit and the Municipality WASH Management Committee and lines of accountability as new items. Over the first year of operation, the municipalities have proven to have better absorption capacity than expected, as well as operational potential that has contributed to better results than ever before both in terms of physical and financial progress, as well as local ownership. The new context provides a new opportunity for improving enabling environment for WASH. The enabling environment at the municipality level could be described as a set of interrelated conditions – legal, organizational, fiscal, regulatory, informational, political and cultural – that impact on the capacity of the local level stakeholders including the local elected members, government officials, non-governmental and community-based organisations (NGOs and CBOs) to engage in their developmental processes in a sustained and effective manner. In WASH context the M-WASH Unit, WUSCs and IMCs, as well as any active local CBOs or NGOs (also international) are those operating within the same space, ultimately all aiming to the |
| Institutions: Weak sector integration. <i>Assumption</i> : weak sector integration will persist for some time. () | formalized especially in terms of organizational and fiscal policies. The local setting gives an excellent opportunity to truly integrate the sector and to work on the enabling environment aiming at 'Sustainable WASH for All'. The M-WASH Units are a great opportunity to finally integrate WASH at the local governance level. The vision is that the M-WASH Units will stay and accommodate WASH related staff, whether debuted by the Department of Water Supply and Sewerage, DoLIDAR or other government authorities (such as health staff working with sanitation and hygiene). The sector integration at local government level could build on the M-WASH Plan. This is also an opportunity to integrate sector at the central level when the central (federal) level ministries, their departments and Provincial functions are being redefined anyway. The Sector Development Plan needs to re-consider the new structures and be fully aligned with such new items as national SDG indicators, and give due respect to the municipality-level priorities. The real-life experiences from both RWSSP-WN and RVWRMP should be now actively presented at the central level especially in the context of finalizing the Sector Development Plan. |

5 SUSTAINABILITY

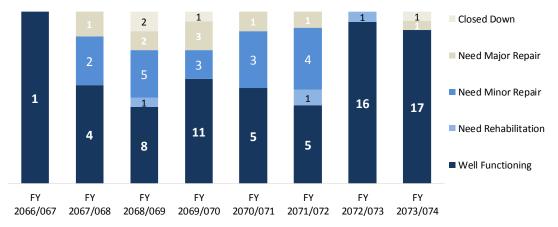

Sustainability of WASH services refers to water services that are continuous over time and meet agreed service levels. While 'functionality' is more about whether the system can technically provide the service at any given point of time, 'sustainability' moves in time, and can be seen as "whether or not services continue to work and deliver benefits over time. Sustainability is about lasting benefits achieved through the continued enjoyment of water supply (and other) practices". (Water Aid, 2011)².

'Sustainability' and 'functionality' are fluid terms in the ever-changing environment. They change in time, and what there is as one-time entry in the Management Information System (MIS) or what has been collected during functionality survey or during the monitoring visits, does not represent the present status of any scheme at any given time: after every rain, structures are flooded or damaged, landslides wipe out pipe lines, thunderstorms hit the electromechanical systems and so on: in Nepal the disasters are more sustainable than anything else. The situation is equally fluid with regards to social and financial aspects: WUSC members change, social settings change, community's internal and external dynamics change, and such as inflation eats up the O&M Fund.

Over the reporting year, RWSSP-WN conducted several studies using the mobile phone application KoBo Toolbox for quantitative geotagged data. The surveys covered a range of topics, touching various aspects of sustainability. This chapter picks up some of those highlights, the reader being encouraged to read the RWSSP-WN Briefs 2017 and 2018 for further details and practical suggestions. All studies explored how to do better, how to improve present approaches and how to develop better tools and training contents, both for internal but also for sector learning.

Sustainability and lift schemes: Lift schemes are now part of the regular menu of options, not a pilot anymore. There is an increasing interest in lift water supply schemes from both the unserved rural communities as well as sector professionals alike. Overall, 84% of all (100) lift schemes were described as 'well-functioning' if we accept that the need for minor repairs are not affecting the overall functionality (Figure 13). The 'minor repairs' mean such repairs that WUSC and their VMW should be able to carry out themselves. The percentage is 67% if counting only those schemes that do not need even minor repair. This compares very well to NMIP figures for 'well-functioning': 19% for the Western development region and 17% for the Mid-western region (NMIP, 2011)³.

Scheme functionality by Fiscal Year when the scheme was completed Total 100 lift schemes

Figure 13. Functionality of 100 lift schemes constructed in RWSSP-WN Phases I and II

² https://washmatters.wateraid.org/sites/g/files/jkxoof256/files/sustainability%20framework.pdf
³ http://www.seiu.gov.np/index.php/documents?folder=Sector%2BReports

There are many issues in favour of solar when compared to electrical lift: no electricity cost; low maintenance if the initial setup is done well; no need for costly and time-consuming process of constructing electricity transmission lines and related administrative processes for such as transformers and connections. Since no transmission lines and pump houses for controls are needed, solar pumping system is quicker to construct as the panel array installation is likely to be easier to install. Overall, the schemes in the sample were found to be functional and appreciated, and well serving the unserved. There were no essential differences in between the electric and solar lift in terms of present functionality. The functionality problems stem from the same reasons as in the gravity flow systems and as such, are not necessarily specific for the lifting system itself. However, the lift water supply systems suffer from the fact that those working with rural DWS schemes tend to come from civil engineering background, with less formal training, real experience and operational understanding with the electromechanical issues. WUSCs, municipalities and project staff alike rely on the suppliers who may not always realize this. Their advice is not easily questioned. At the same time, these suppliers may not be that familiar with such as water quality concerns and civil structures, and hence, such as intake structures get overlooked.

Sustainability and water quality: Water quality is a critical issue. Even if only three schemes out of 100 were found having presence of bacteria, the problem is sand, silt and mud. While in all cases, lift or gravity, the water source should be safe and clean, this is often not the reality, especially during the monsoon time. Pumping systems cannot accept the same water as the gravity water supply systems. Considering the high investment costs related to the lifting system, and the usual very hard labour in terms of community contribution, it is astonishing how little attention the water source itself gets. This is a challenge to any rural water supply system, and it appears that it is time to look at the standard drawings in this regard. Covering a water source with plastic does not make it safe. Therefore, the strong recommendation for the post-construction investment schemes during the final year is to look back into the water source: how can it be protected both from the water quality and the physical damage point of view? This is not the right place for savings!

Sustainability and O&M: Operation and maintenance by trained VMWs is a challenge for the functionality of any rural DWS system, even a simple gravity system. Various studies in Nepal have drawn attention to the poor functionality. This is even more critical for a lift system: pumps do need a skilled operator. These systems cannot rely on any VMW who works on 'when-needed-if-available'-basis. Even if both electric and solar pumps have increasingly automatized systems to prevent such as dry run, they cannot be left on their own device. Since lifting systems are new technology, we cannot expect that experienced pump operators exist in the same way as skilled maintenance workers ('*mistries'*) do. Capacity building of the local pump operators as well as strengthening the capacity of the engineers and other WASH sector professionals with regards to lifting systems needs to increase at par with the increasing number of lift schemes.

Financial sustainability: Financial analysis at the planning stage is a must. While there are tools for this (see e.g. Shrestha et.al, 2014:118)⁴, and the design software used in RWSSP-WN itself has a template for it, the financial analysis remains incomplete. In this sample it was very positive that the WUSCs did have an O&M Fund, and that in average there were good balances available (NPR 250,000) and that in half of the schemes studied the users had invested later in capital maintenance themselves. This study did not do financial analysis in terms of initial capital expenditure, operational costs and capital maintenance expenditure – that will be a study of its own right.

Sustainability, sanitation & hygiene: behaviours related to sanitation and hygiene add another layer of complexity: for instance, menstruation related taboos undermine the sustainability of sanitation and also hygiene by forcing women not to use their toilets but rather, to practice open defecation.

⁴ Shrestha, Jha & Karki (2014). Training Manual on Solar PV Pumping System. GRID Nepal in joint venture with Centre for Energy Studies, Institute of Engineering, TU, and Alternative Energy Promotion Centre (AEPC) p.156

6 LESSONS LEARNED, CONCLUSIONS AND RECOMMENDATIONS

The reporting year has certainly been a year for learning. It has been a year when a risk was taken in entering the new context, being one of the first ones to do so.

With regards to local governance capacity and institutional sustainability, there is a huge need to strengthen municipality-level institutions and improve their efficiencies. We acknowledge that the newly elected representatives have the core role and responsibility when identifying municipality-wide priorities. They must both represent their constituents and provide leadership. Therefore, it is of utmost importance that the Municipality WASH Management Committees, where also the elected members are represented, prepare the next annual work plan even if it is the final year of RWSSP-WN Phase II and a number of phase out issues need to be considered.

The Project is in a good position to strengthen the capacities at the municipality level. While working for WASH and technical issues, we can address the broader local governance environment. For instance, strengthening the capacity of the municipality accountants will benefit financial transactions in the entire municipality. Taken the urgent and intensive capacity building needs at the municipality level, the large number of M-WASH Units (55) was a real challenge. To ensure the quality and institutional sustainability of the M-WASH Units, the last year of RWSSP-WN Phase II has to reduce the number of these units. In the seven Sanitation Program municipalities, the Project implemented the program through local CBOs. These sanitation-only districts were phased out in the end of FY05.

Managing information is another challenge. During the reporting period, the project was getting financial and progress reports from 99 local units. This was too much for the small team to handle: to ensure that the figures are correct, to maintain transparency and accountability, and with those, overall trust on any financial or physical progress. To monitor the large number of units, the Project developed a cloud-based (Google Drive) monthly reporting system that can be used for both planning and reporting purposes, and that can be accessed by several persons. Towards the end of the reporting period, a new Google Sheet (cloud, browser based) user interface was introduced to improve the user friendliness of the Project MIS. This worked out well, and over the final year, also the MWF reports will be entered into this system. To ensure the quality of data and reporting, the Project must institutionalize a system including routine monitoring of data and periodic in-depth assessments where one-to-one feedback can be given to the individual municipalities. This system has the potential of continued use in the municipalities also after the Project has phased out.

With regards to sustainability, the new local structure is both an opportunity and threat: if the municipalities are not getting support at this critical moment when new municipality-level policies and practices are established, the momentum for building local WASH governance capacity for effective WASH service delivery can be lost. Similarly, if the central level policies do not encourage or give municipalities this opportunity by forcing to keep sector fragmented due to some vested interests, the opportunity is lost. This is the chance to have municipalities that follow the principles of good (water) governance and transparent decision making which is the prerequisite for decreasing disparity and for improved health of the inhabitants of the area. It is more important than ever that the Project supports the fresh local authorities in their development to strong and sustainable service providers, and as such it has been hard to start phasing out already now from these local units that were keen to continue with the Project.

With regards to inequalities within the municipalities, the WASH services need to continue to be targeted in an efficient manner. Towards the end of the reporting period, the Project managed to pilot municipality-wide M-WASH Plan together with Harinas Rural Municipality in Syangja district with good results. RWSSP-WN II had earlier succeeded in this with the V-WASH Plans (see Project webs-site for both V-WASH Plans and the related guidelines), and by selecting the schemes through the local government planning process with the 'serving the unserved'-principle guiding the final

selection. These principles can now be mainstreamed into the M-WASH Units to ensure that the vulnerable groups and the remote corners of the municipality will continue to benefit from the WASH services. Decreasing the disparity between the worst- and best-served communities within the municipality helps to decrease the disparity also between municipalities.

The new municipality context provides an excellent opportunity to clarify the roles and responsibilities in between "Service Authority" and "Service Provider". In the municipality, the Service Authority is with the elected body, represented as the Municipality WASH Management Committee in the case of RWSSP-WN present working modality. The actual Service Providers are the WUSCs and IMCs. Service authorities should have the legal mandate to ensure that water services are planned and delivered. Service Authorities do not necessarily need to be involved in direct service delivery themselves but in case of RWSSP-WN Phase II working modality, they are: the Municipality WASH Management Committee operates under the chairpersonship of the elected chief, with the vice-chairperson being another elected member.

Linked to the above and the notion of enabling environment, the new context after local governance restructuring opens a number of new opportunities for such as sector harmonization, but also for donor harmonisation and joint programming with other development partners. The lead is with the municipalities who now have more authority and more resources than even before. There cannot be 'one-fit-for-all' sector 'harmonization' at the central level but rather, the central level elements should provide broader frame of reference within which the municipalities make their own decisions.

Table 1. Logical framework – Project Document, June 2014 with markup August 2017

| Intervention Logic Proposed Objectives | Existing Indicators | Proposed new indicators | Remarks on proposed changes |
|--|--|--|-----------------------------|
| Purpose The poorest and excluded households' rights to access safe and sustainable domestic water, good health and hygiene ensured through a decentralized governance system | 150,000* previously unserved people benefit from access to improved water supply All water supply schemes supported by the project provide functional, improved and safe water supply services No one practices open defecation (all districts declared ODF) All ODF districts have developed post-ODF strategy and ensured access to post-ODF support to their VDCs More than 220,000 people benefit from the capacity building activities District s' WASH programmes capable to provide support to VDCs, WUSCs and other community groups on a responsive basis in scheme planning, implementation and O&M, showing consistently improving the annual performance * Target 100,000 without the extra investment | 150,000 people benefiting from improved (basic and safely-managed) water supply as a result of programme (direct beneficiaries) * Number of people benefiting from improved (basic and safely managed) sanitation as a result of programme (direct beneficiaries)** All water supply schemes supported by the project provide functional, improved and safe water supply services No one practices open defecation (all districts declared ODF) All ODF distrcits municipalities have developed post- ODF strategy and ensured access to post-ODF support to their VDCs wards More than 220,000 people benefit from the capacity building activities <u>District Municipality</u> WASH programmes capable to provide support to VDCs WUSCs and other community groups on a responsive basis in scheme planning, implementation and O&M, showing consistently improving the annual performance *New wording in line with the MFA reporting purposes, counting the same as earlier. ** New indicator directly serves the reporting purposes of MFA | Purpose fully valid. |

| Intervention Logic Proposed Objectives | Existing Indicators | Proposed new indicators | Remarks on proposed changes |
|---|---|---|--|
| Results Result 1 Access to sanitation and hygiene for all achieved and sustained in the project working districts municipalities | 1.1 # of VDCs declared ODF 1.2 # of institutions/schools/public places supported by the project fund in Phase II with disabled and gender-friendly toilets and access to hand washing 1.3 # of Wards declared for having achieved total sanitation (wards within which each household complies with at least four out of five main TBC criteria as listed in the National Sanitation and Hygiene Master Plan) 1.4 # of VDCs implementing post-ODF strategy with institutionalised post-ODF support mechanisms accessible to all within a VDC | 1.1 # of municipality wards declared ODF 1.2 # of institutions/schools/public places with improved sanitation facilities and access to hand washing 1.3 # of HHs that have achieved HH level Total Sanitation Indicator (comply with at least four out of five main TBC criteria as listed in the National Sanitation and Hygiene Master Plan) * Note: previous Indicator 1.4 gets covered with the new indicator 3.7 under Result area 3. | Result 1 fully valid; changed 'district' into 'municipalities'. Indicator 1.2: Removed definition "disabled and gender-friendly". These were added at the Inception phase of the Phase II, and since then we have found it practically impossible to measure these. Both are context specific, constituting of several sub-indicators. The more criteria we added to this indicator, the less toilets passed the criteria, the criteria sometimes being entirely meaningless considering the location where the toilet was built in the first place (especially in case of public toilets that may be just one compartment along highway). While the issue remains high in the agenda, it is proposed to be removed from this indicator. |

| Intervention Logic Proposed Objectives | Existing Indicators | Proposed new indicators | Remarks on proposed changes |
|---|--|---|--|
| Result 2 Access to safe, functional and inclusive water supply services for all achieved and sustained in the project working VDCs municipalities | 2.1 Safe water: # of water supply schemes supported by the Project fund in the Phase I and Phase II apply a Water Safety Plan with CCA/DRR component. 2.2 Institutional capacity: # of WUSCs supported by the Project fund in the Phase I and Phase II are inclusive and capacitated to provide sustainable services. WUSC defined as functional fulfils the following criteria: a) WUSC is registered and has statute b) O&M plan made and applied c) Adequate water tariff defined and collected d) VMW trained and regularly working as needed e) WUSC has proportional representation of caste/ethnic/social groups and 50% women 2.3 Improved services: # of water supply schemes supported by the Project fund in Phase II provide improved water supply services for previously unserved households in the programme VDCs (previously unserved means no access to improved water supply). Scheme defined as improved and functional when it has the Service Level 1 for quantity, access, reliability and water quality. 2.4 Reaching the unreached: # of water supply schemes supported by the Project fund in the Phase II reaching the unreached (previously unserved by improved water supply supported by interventions external to VDC). 2.5 Institutional water supply: # of schools and institutional/public locations supported by the project fund in Phase II that have safe and functional water supply with accessible water points to all users. | 2.1 Safe water: # of water supply schemes supported by the Project fund apply a Water Safety Plan with CCA/DRR component. 2.2 Institutional capacity: # of WUSCs supported by the Project fund are inclusive and capacitated to provide sustainable services. WUSC defined as functional fulfils the following criteria: a) WUSC is registered and has statute b) O&M plan made and applied c) Adequate water tariff defined and collected d) VMW trained and regularly working as needed e) WUSC has proportional representation of caste/ethnic/social groups and 50% about half are women 2.3 Improved services: # of water supply schemes supported by the Project fund provide improved water supply services for previously unserved households in the programme VDCs municipalities (previously unserved means no access to improved water supply). Scheme defined as improved and functional when: a) Improved: Piped b) Accessible: located on premises b) Reliability: Available when needed c) Quality: free from microbial contamination | Indicator 2.1: Removed 'supported in the Phase I and II' as from FY04 onwards the project needs to stay in those Municipalities where MoU has been signed. There are many schemes in non-project municipalities. Since D-WASH Unit staff is now assigned into municipalities, there are simply no human resources at this point to address needs outside those areas that have not signed MoU. Indicator 2.2: Changed 50% women into 'about half' as there is usually non-even number of WUSC members. Mathematically 50% is not possible. Indicator 2.2: For the Phase I schemes one third women in WUSC is accepted. Indicator 2.3. aligned with SDG 6. Indicators 2.1, 2.2 and 2.3 consider both Phase I and Phase II schemes. Phase I schemes are supported as appropriate in the municipalities the project has MoU with. |

| Intervention Logic | Existing Indicators | Proposed new indicators | Remarks on proposed changes |
|---|--|---|---|
| Proposed Objectives | | | |
| Result 3 Strengthened institutional capacity of government bodies to plan, coordinate, support and monitor the WUSCs and other community groups in the implementation, operation and maintenance of domestic water, sanitation and hygiene programmes in a self- sustainable manner | 3.1 # of districts have D-WASH Plan that is used and periodically updated 3.2 # of VDCs have V-WASH Plan that is used and periodically updated 3.3 # of DDCs practicing coordinated and inclusive planning through D-WASH CC as per the D-WASH-CC Terms of Reference. 3.4 # of VDCs practicing coordinated and inclusive planning through V-WASH-CC as per the V-WASH-CC Terms of Reference. 3.5 Annual performance evaluation done in each district and its D-WASH Unit as per the performance indicators signed in the MOUs in between DDCs and DoLIDAR 3.6 Studies relating to service delivery, sustainability and related mechanisms made and together with studies made in Phase I processed towards practical guidelines and operational tools | The results achieved in FY01-FY04 under indicators 3.1 to 3.5 remain valid, but will not be counted over the remaining two years as these are 1) largely achieved and 2) VDCs and Districts are not valid units for counting anymore, the focus is now in Municipalities. 3.6 will remain valid as it is. New indicator: 3.7 Number of local administrative units (Municipality WASH Units) with established and operational policies and procedures for participation of local communities in water and sanitation management. Considered operational if the Municipality WASH Unit can plan, implement and report their WASH Programme, verified by: a) Municipality WASH Unit's Monthly Progress Report b) Municipality WASH Unit's Monthly Workplans and staff monthly time sheets c) Municipality WASH Unit Financial Statement from the Municipality Accounts Section d) Municipality WASH Unit Event Report which shows the GESI aspect of participation | Sustainable Development Goal Target 6.b: Support and strengthen the participation of local communities in improving water and sanitation management. Indicator 6.b.1 <i>Proportion of local</i> <i>administrative units with</i> <i>established and operational policies</i> <i>and procedures for participation of</i> <i>local communities in water and</i> <i>sanitation management</i> In the above, "Local administrative <i>units</i> " in case of RWSSP-WN II are Municipality WASH Units (total 55 in the start of FY05) that are: "considered to be operational if the policies and procedures for <i>participation of local communities</i> <i>in water and sanitation</i> <i>management are being</i> <i>implemented, with appropriate</i> <i>funding in place and with means</i> <i>for verifying that participation took</i> <i>place</i> ". In case of RWSSP-WN II: the existing Step-by-Step including such tools as CAP and public audits, participatory planning tools and participatory monitoring; HRBA & GESI Strategy and Action Plan and |

Table 2. Results targets by fiscal year as per actual for FY01-FY05, and as projected for FY06.

The achievements of FY05 have been color coded by green=on track, yellow = almost there, red=special attention needed Original end-line targets in brackets when new target has been set.

Phase II New scheme = Scheme that was included in the Annual Work Plan first time in Phase II

Phase I Carry over scheme = Scheme that was initiated in Phase I but was completed in Phase II

Phase I Improved scheme = Scheme that was initiated and completed in Phase I but required improvements in Phase II and new beneficiaries we connect to the scheme

Phase I = Any scheme initiated and completed before Phase II that is given only Post-Construction (PoCo) support in Phase II

IPC = Implementation phase completed and financially cleared

IPC* = Implementation phase completed but not financially cleared

PoCo = Post-Construction (software support)

PoCo-i = Post-Construction investment support ongoing (hardware support)

PoCo-c = Post-Construction investment support completed (hardware support)

¹¹ Includes gravity, lift and overhead tank Phase II New, Phase I Carry Over, Phase I Improved and Phase I schemes with more than three taps in IPC*, IPC, PoCo, PoCo-i and PoCo-c status.

¹² Number of water supply schemes supported by the Project fund that apply a Water Safety Plan with CCA/DRR component.

¹³ WUSC has gender balance (min.33 % women in Phase I schemes and min. 50 % women in Phase II schemes) and representative of all beneficiary ethnic groups

¹⁴ WUSC has gender balance (min.33 % women in Phase I schemes and min. 50 % women in Phase II schemes) and at least one woman and one representative of disadvantaged ethnicity in a key position

¹⁵ Before FY03, only Phase II New, Phase I Carry Over and Phase I Improved schemes in IPC*, IPC and PoCo status were included in the analysis (only new schemes). Since FY03 also Phase I schemes in PoCo, PoCo-i and PoCo-c status have been included in the analysis.

¹⁶Before Semi-Annual Progress report FY05, the total figure consisted of only gravity, lift and overhead tank Phase II New, Phase I Carry Over, Phase I Improved and Phase I schemes in IPC, IPC* and PoCo status. Starting from Semi-Annual FY05 (due to the revised indicator), the figure consists of Phase II New, Phase I Carry Over, Phase I Improved and Phase I schemes of <u>all technologies</u> in IPC, IPC*, PoCo, PoCo-I and PoCo-c status.

¹⁷ Supported by the Project fund in Phase II that provide improved water supply services for previously unserved households in the programme area (previously unserved means no access to improved water supply). Scheme defined as improved and functional must fulfil the QARQ criteria: quantity=>25 liter per capita per day, accessibility = water fetching time not exceeding 15 minutes per roundtrip, reliability = 11 months or more of water per year, quality = absence of faecal coliforms

¹⁸ In Semi-FY05 the figure was counted based on scheme technology so that all technologies except dugwell and point source improvement schemes were considered to serve water "on premises". In APR FY05, the figure includes schemes that have water fetching time less than 5 minutes per roundtrip (new indicator in MIS).

¹⁹ Number of Phase II New, Phase I Carry Over and Phase I Improved schemes in IPC, IPC*, PoCo, PoCo-I and PoCo-c status (all technologies).

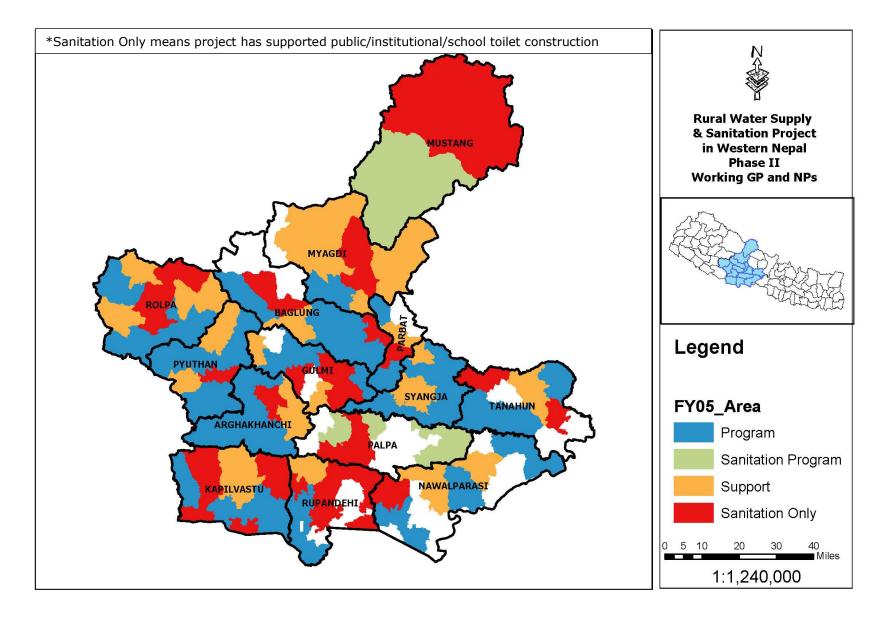

²⁰ Number of schemes supported by the Project fund in Phase II reaching the unreached (previously unserved by improved water supply supported by interventions external to municipality).

²¹ Number of schools, institutional and public locations supported by Phase II New, Phase I Carry Over and Phase I Improved schemes in IPC, IPC*, PoCo, PoCo-I and PoCo-c status that have safe and functional water supply with accessible water points to all users.

Annex 5 Financial Progress Report

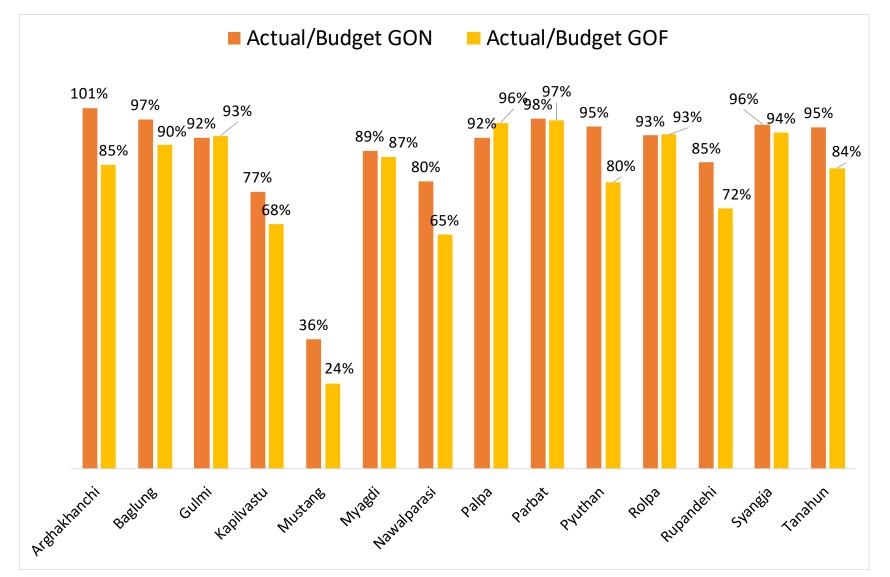

Note: where 'district' is reported, the figure is counting together all individual municipalities + the Technical Support Unit under DCC into one figure. Contrary to the all previous reports, the figure now counts together a number of local units, see Annex 2.

| 14 | Tanahun | 24,897,000.00 | 24,896,934.28 | 24,650,507.00 | 246,427.28 | - | | 246,427.28 | 22.8.2017 |
| τοτ | AL | 285,628,000.00 | 266,788,573.66 | 246,210,738.42 | 20,577,835.24 | 9,874.81 | 2,083,008 | 18,484,952.43 | - |

Note: NPR 2,083,008.00 was reimbursed the expenditure to GoN from GoF of FY 2072/073 based on the ratio of approved budget. Therefore, NPR 2,083,008.00 should be allocated to GoF expenditure in Investment heading in FY 2074/075.

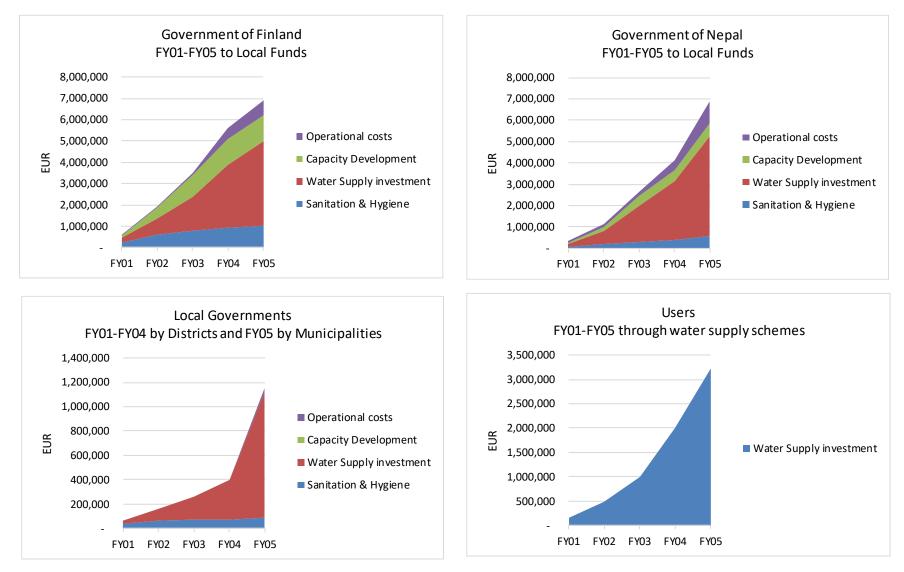

Annex 5 Figure 3 Government of Finland annual cntributions (EUR)

Note: in addition to above, there are GoF Overall contingency of EUR 312,000 and substantial balance under 'Reimbursable TA'. It is recommended to plan these at the time of semi-annual progress report to optimize the remaining half of the FY.

Annex 5 Figure 4 Currency rates over the past 180 days (EUR:NPR)

Annex 5 Figure 5 Result (component) and FY-wise cumulative actual contributions FY01 – FY05 (EUR) See next page for details on headings

Annex 5 Page 7 of 8

Notes to the cumulative charts in the previous page:

| Result area | GoN Red Book Budget heading | Description | | | |
|--|---|--|--|--|--|
| 1. Sanitation and Hygiene | EH 22522 Others Program costs | All sanitation and hygiene related activities except the public construction were funded from this heading. Including: special days celebrations (Sanitation Week, To Day, etc), campaigns and rallies, rewards for ODF declarations, events relating to awareness and triggering behaviour change. | | | |
| 2. Water Supply Investment | EH29611 Public Construction, including water supply & Public, Institutional and School Toilets | All public construction (investment) was funded from this heading. This budget was released to the accounts of WUSCs and Institutional Management Committees and audited through the public audits during the final monitoring. | | | |
| 3. Capacity Building | EH 22512 Capacity Development/Training/ Workshops | All water supply and WUSC/Institutional Management Committee related training as per the Step-by-Step process was funded through this budget. Also WSP++ and post-construction support related training was funded from here. The water supply related results would not have been possible without these activities. | | | |
| No budget heading for Result 3 in the original Project Document. | EH22411 Service, Consultancy and SP costs | There was no result-level budget for this in the original Project Document, although Result 3 area indicators are directly linked here: over FY01-FY04 this fund covered the staff and other costs related to the District WASH Units, and during FY05 related to the Municipality WASH Units. Without these people, none of the above results would have been possible. | | | |

Table B: TA-funded long-term and short-term experts planned and actual **person months** post-wise

Note: Total cumulative balance counted from (all actual/all planned) during the four years (reporting) period; this is only FY01 from FY05

* indicates that <u>all available p/m</u> will be distributed among the staff. It is estimated that each staff shall have at least 9.5 p/m over the FY except CAAO who must have full year. Balances to be calculated again in January 2019, and on monthly basis from there.

** CTA shall have about 1 p/m remaining after June 2019. Similarly, CAAO must have 2.0 p/m after Jestha closing (Ashad & Shrawan, until about 16.9.2019 depending on remaining p/m available)

Annex 7 Risks and Recommendations

| Issue, Risk and Assumption | Status at the end of FY05 and suggested Project action for FY06 |
|---|--|
| Risks in the new contex | rt |
| Limited commitment of the municipalities to its new role of facilitator and support agency | • The municipalities independence from the central government is an advantage but only if the local leaders appreciate the importance of WASH among other priorities. The risk under these circumstances is that rural water supply and sanitation schemes have no ownership and still no support outside the local communities (WUSC) as used to be the situation also earlier. |
| | • In FY05, the Project transferred itself fully from the district level to the municipality level as one of the very first projects to do so. This was the first operational year for the newly established municipalities in all possible ways, part of the year still being affected by the local elections and related code of conduct. The Project wanted to avoid "supply driven" project modality and as such, it was critical that the new municipalities were committed to take the leadership position from the beginning. The actual progress and such as the financial contributions from the municipalities over FY05 have shown that the commitment does exist albeit not in every place. |
| | • The M-WASH Units are in an excellent position to provide formal support to WUSCs, Institutional Management Committees and other local institutions interested in improving and maintaining sustainable WASH services. This support has been missing earlier: WUSCs did not have access to funding for emergency repairs, service level improvements, extensions or Capital Maintenance works. |
| | • Given that this was the first year and, in many cases, not full fiscal year due to the election period, the M-WASH Units are not necessarily fully functional and autonomous yet. The future operations in the absence of external support such as RWSSP-WN are heavily constrained by other interests of local and also provincial leaders and government agencies alike: WASH may not be their priority. |
| | • Other aspect where commitment is needed stems from the human rights- based approach and GESI principles: will the elected leaders hear the voice of the disadvantaged groups, for instance, if these are not their constituents? At the end of FY05, the Project piloted a novel approach into Municipality-wise WASH Plan (M-WASH Plan) together with the Harinas Rural Municipality. In this case the local leaders appreciated the way how each household situation shows in the map, and the plans were made ward-by-ward and eventually at the municipality level accordingly. If this was to be repeated in other places, there should be the initial commitment from the local leaders to stay responsive to the results and the citizens voice, regardless of any politically motivated interests. |
| Limited implementation capacity of the Municipality WASH Units and private sector | • The Project transferred all planning and implementation works to the M-WASH Units, making the transfer smooth by reallocation of the human resources from the previous District WASH Units into the municipalities. This meant that not all M-WASH Unit staff were new to WASH and related approaches. Over the coming year the Project has to put more effort in the M-WASH Unit staff training in those cases where the municipality is committed to keep the staff also after the phase out of RWSSP-WN support. |

| | • Over FY05, the Project continued intense monitoring as per the Step-by-Step approach, stretching its own limits in terms of having a record high number of active schemes, biggest budget ever, and in total 99 local units through which funds were released instead of 14 districts. |
|---|---|
| | • The role of local NGOs have not been considered in RWSSP-WN Phase II as there is no more time to initiate anything in this regard. In the future the municipalities could consider hiring on long-term or short-term contracts at least the local CBOs/local NGOs for specific tasks, such as sanitation and hygiene related programmes. |
| | • Similarly, the potential human resources available through the local private sector, such as solar suppliers, should be further explored. M-WASH Unit would not need to be able to do all by itself but rather, be able to mobilize both human and financial resources also from other sources than its own. |
| Delays in the release of funds to and from the municipalities | • Over FY05 many policies, rules and regulations with regards to the local governance were still work in progress. For instance, proper and timely budgeting procedures were not clear, and as a result the municipality accountants did not use even the same accounting software to process payments. The municipalities, especially the rural ones, did not have full staffing, or missed key human resources, such as 'real' accountants. |
| | • During FY05 the fund flow still went through the district treasury, and the DCCs were able to host the Technical Support Units. This is not possible on the coming year, and for FY06 the Technical Support Units have been budgeted under centrally located municipalities that are willing to host these. The coming year shows how this will work out in practice: can Technical Support Unit staff continue supporting all municipalities or not? If this is not functional, all staff will have to operate from PSU or PCO, with duty station in PSU and PCO respectively. |
| | • There are many policy-level decisions yet to be made, especially as it relates to the provincial structures. At the time of completing this FY05 Annual Progress Report, even the future of DoLIDAR was not clear. |

| Issue | Finding | Recommendations | Update at the end of FY05 |
|----------------------------|---|---|---|
| Sanitation (Result 1) | In terms of ODF declarations, RWSSP- WN II has performed well; the actual situation in many ODF declared VDCs is below ODF standard. Situation is better in the Hills but in the Terai, ODF has often been forced by local authorities and politicians. More simplistic sanitation and behaviour change promotion tools would be needed. | focus more on ensuring the true ODF status where it has been declared and on ODF follow- up and monitoring rather than further ODF declarations; emphasize strong community-wide hygiene education programs before, during, and after physical water and sanitation interventions are implemented; ensure adequacy of water supply as part of Total Sanitation; apply more intensive and diversified promotion methods for ODF, post-ODF and Total Sanitation as well as source protection, especially in the Terai), and use students in school-led Total Sanitation more intensively integrate solid waste management in promotion of Total Sanitation; work out drainage improvement measures in the Terai in order to maintain hygiene and sanitary conditions at the level compliant with ODF and Total Sanitation. | Several surveys focusing on the availability and use of toilets were completed in FY05 and published as 'RWSSP-WN Briefs'. The use of mobile-phone based application allowed geotagging the replies that makes impact studies possible for FY06 in selected locations. It is now obvious that even if the toilets are constructed, they are used by all at all times. Systematic Behaviour Change Communications developed to address the use of latrines. This will be work in progress over FY06 with a number of lessons learned coming up. Hygiene in terms of focusing on handwashing with soap and menstrual hygiene management will be the focus over the coming year. There is need to further strengthen the link in between WSP++ and Total Sanitation at the household level. This links to such as keeping water safe and food hygiene practices at the household level. Solid waste management is part of Total Sanitation package. There is a serious sector-wide need to look beyond pit: ODF in Nepal over the past few years has been largely achieved with one-pit latrines, with urban areas having an increasing number of septic tanks. How the pits are emptied and where the contents get disposed remains an open question. Sustainable Development Goals (SDG) call for safe management of these end products. By far the project does not consider single-pit latrines or septic tanks as 'safely managed sanitation' as per SDG definitions as long as it is unclear what happens to the contents when the pit or septic tank gets full. |
| Water supply (Result 2) | The project has been very successful in reaching the unreached, but this is becoming increasingly | Technical and financial sustainability: use the structures of old WS schemes to the extent possible; | Technical and financial sustainability: Use of existing DWS structures has been encouraged but there are no detailed data to what extent this has actually been done. In the future MIS applications this aspect could be added into systematic data collection. |

Original recommendations as a reference (Mid-Term Evaluation, Final Report, April 30, 2016, selected items from the table on pp.53-55)

| ti ir a ta ir si so | time, more vulnerable n regard to financial | consider setting a ceiling per capita cost, adjusted to the capacity of the users to cover O&M costs; assess the applicability of rainwater harvesting where piped water supply is unfeasible; continue to consider options, such as protection of communities' water sources, i.e., point source improvement (without piping) to provide safe water, albeit below the "basic" level in terms of accessibility; advocate for mainstreaming WASH initiatives in VDC and DDC periodic plans for resource leveraging, ownership and sustainability. | There is still no per capita cost ceiling; the actual contributions are tailored scheme-by-scheme. For instance, in many cases the private connections are fully at the users' contribution. Users' ability to cover operation and maintenance costs especially in electric lift schemes is still critical. This has partly let to the situation where RWSSP-WN gets 'impossible schemes' that were first intended for other funding. Rainwater harvesting (RWH) should always stay high in the agenda. We have observed that the RWH jars constructed some 15-20 years ago are well maintained and still used. Also, the communities continue to maintain these in the places where lift schemes have been constructed. Even if the winter rains are largely missing, making rainwater harvesting not an appropriate option alone, this remains an important aspect of water security. Point source improvements (without piping) are done and considered as 'improved and safe' water supply even if these are not piped into premises. The new municipalities will start preparing their periodic plans over the coming year. The Project will be advocating mainstreaming WASH initiatives into these, considering the existing V-WASH Plans as valid planning documents even in the new context. |

| | prepare and distribute ledger books, O&M diaries, templates/forms for meeting minutes, etc. with relevant training to WUSCs and VMWs. | safely kept. |

| Institutional aspects (Result 3) | The project has a very systematic approach in WUSC capacity building, but the impact of trainings has not always been permanent. The future of the key actors at the district level – D-WASH Units is not ensured. The project has produced and updated a considerable number of manuals, guidelines, briefs, brochures, etc., some of them too comprehensive. | there should be a no-cost extension of Phase II by one full year (for FY06), including 1 MEUR from GoF and another 1 MEUR from GoN; the project shall prepare a proposal for an overall plan for the remaining period of Phase II, including the one-year extension; and the project working area should not be expanded from the 14 districts to ensure sustainability of achieved results. the project shall be adapted to new institutional structure (if such emerges); | With the MOUs and related Human Resources Mobilization Guideline, the Project has adapted to new institutional structure. The Phase II is now running on no-cost extension as far as TA budget is considered. GoF and GoN have already both allocated additional EUR 1 million each, with another EUR 500,000 from GoF being available for CY2019. This has enabled the Project to be the first project in the working municipalities to work through the newly established municipalities. The Project prepared a proposal for an overall plan for the remaining period of Phase II, including the one-year no-cost (no additional TA) extension. This was approved and FY06 has now started. The project working area was not expanded from the 14 districts but has now resulted in 62 Programme Municipalities and 23 Support Municipalities (ref. MoUs as Annexes in the Annual Work Plan FY05). In addition, there is a commitment to the Terai municipalities that if they can keep their programme running from their own resource until Mangsir (mid-December), the Project can support them from the additional GoF EUR 500,000. The above is also a risk from the phase out point of view. There is no 'consolidation phase' as it appears that all municipalities want to keep their programmes running over the entire FY06, many being also committed to continue their M-WASH Units after the phase out of RWSSP-WN II. |

| Exit and future Finnish support | The investment budget of Phase II would allow the continuation of scheme implementation at the pace of the first two years of Phase II by additional four months. Thereafter there would be a dramatic decline | Implementation pace and project exit: slow down the implementation for FY04; slowing down would also allow more time for adaptation to new institutional arrangements, which are expected to be in place by then; there would be more time to prepare districts (if they then exist) to continue the work for the benefit of WUSCs. | The Project did not slow down the implementation for FY04 which turned out to be the biggest year both in terms of budget utilized and scheme progress, both in terms of quality and quantity; the slowing down will take place towards the second half of FY06 only as the Municipality WASH Units established at the start of the FY05 should have an opportunity to get themselves "up and running". As it turns out, the FY05 was the best progress ever in many ways, both from financial, physical and institutional points of view: the newly established institutions, M-WASH Units, managed to have the best financial progress percentages ever with the biggest budget ever, |

| of implementation capacity. | Finnish support, possibly from RWSSP-WN and/or RVWRMP should increasingly be directed to sector development at the central level simultaneously with RWSSP-WN II in its remaining time. This should be part of profound efforts to improve sector efficiency and ultimate strengthening of national and local institutional capacity in a sustainable manner. | record number of beneficiaries that now exceed all expectations, with large number of WSP++s and Total Sanitation beneficiaries, as described in this report. If we would have slowed down already in FY04, all this would not have happened. These new institutional arrangements, which are expected to continue existing after the Project has phased out, need more time to establish themselves within the new local governance structure to be able to provide services to the citizens. Finnish support, possibly from RWSSP-WN and/or RVWRMP should |
